Jio Phone

The highlight from Reliance Jio's 40th AGM was the JioPhone. After talking about cheap data connections and offers over the past year or so, Jio seems to be moving to the second phase of its plan. The company has been steadily increasing its portfolio of Lyf branded smartphones, but the Jiophone is a feature phone with 4G connectivity, something Jio has been working on for quite a while now.

Reliance says the JioPhone is 'Made in India' and is intentionally designed to look like a conventional feature phone. It sports a 2.4-inch QVGA display and houses an intelligent voice assistant that can help in interacting with the device to make calls, use Jio apps, search the web, and more. The handset features an alphanumeric keypad with a 4-way navigation toggle wheel and support for an SD card slot. The handset comes bundled with the company's apps

like Jio Music, Jio TV and Jio Cinema to name a few and offers additional features like Torchlight and FM Radio.

Of course, we expect unlimited data, calls and SMSes from Jio, and that's exactly what they're offering. Starting August 15, at just ₹153 per month, JioPhone users will get just that. We will go much more indepth when we get our hands on one later.

Moto Z2 Force

LENOVO-OWNED MOTOROLA will announce its next flagship smartphone, the Moto Z2 Force at an event in New York on July 25 (after our mag has already gone to print). The smartphone will join the already available Moto Z2 Play as the second member of the Z2 family.

The smartphone is said to offer water repellant nano-coating and run Android 7.1.1 Nougat out of the box. The handset will be offered in super black and fine gold colour variant while T-Mobile is getting lunar grey as an exclusive in the US. The specifications suggest that the smartphone will compete with Samsung's Galaxy S8 series and other Snapdragon 835-powered smartphones like OnePlus 5. However, Moto Z2 Force has an edge in the form of MotoMods which enhance the ability of the phone. Wait for our review to see how it does against other flagships.

EXPECTED SPECIFICATIONS

► 6mm thick | ► 5.5-inch Shattershield AMOLED display | ► 2560 x 1440 pixels | ► Snapdragon 835 | ► 4GB & 6GB RAM variants | ► 64GB storage (128 GB in China) | ► microSD card slot (upto 2 TB) | ► 2730mAh battery | ► 12 MP dual rear cameras | ► 5MP front camera
