

Bondic

Funding as of July 21: CA\$ 124,507 of CA\$ 45,000 goal

Bondic is a tool that uses a liquid plastic formula that hardens in just 4 seconds after being exposed to a special UV light.

Now, to understand how Bondic works you need to understand plastic. Plastic is basically a polymer chain. Polymers are made of monomers which are attracted to each other, which leads to a polymer chain.

The formula used in Bondic stops this attraction from happening with a liquid. This liquid gets out of the way when exposed to the special UV light and allows the monomers in Bondic's formula to

instantly attract each other and become a hard plastic in seconds.

The advantage you have here is that you don't have to wait for the formula to dry, you control when it hardens. This allows you to use Bondic for things which would otherwise be impossible by other means. In fact, if you have a file at hand, you could sand the intended surfaces before and after the joining process to create a permanent bond that is not protruding in any manner.

Some of Bondic's uses include being able to fix leaks, insulate wires, make new threads for screws, rebuild broken materials etc. The applications are quite vast. You're literally making hard plastic here, so it's like a mini-3D printer in essence. Definitely a handy tool to have around. You can learn more about Bondic on Kickstarter. Check out the different reward tiers - they go as high as \$9,200 USD!

Sound Heroes Bluetooth Speaker

Funding as of July 21: \$387,266 of \$20,000 goal.

A bluetooth speaker that looks like a futuristic android and has a built-in smoke machine might sound like a bit much – but we don't care, it looks really cool.

The folks who made the speaker said they wanted to make something that set itself apart from the crowd. Well, they succeeded. Kalium's Sound Heroes are definitely unique when it comes to design; you're not going to find another set of speakers like these. But if that wasn't enough, the Sound Heroes speakers also double as wireless charging docks for your phones, as Wi-Fi range extenders AND as subwoofers.

They've even got color variations for their lighting, and over 16 million colour choices at that! Who needs to go to the club when you've got one of these babies at home. Sound Heroes come with an app which lets you adjust the lighting, pair with other Sound Heroes, set alarms etc. You can check them out on Indiegogo.

SPECIFICATIONS

Speaker: Min. Freq. Response ▶ 120 Hz | Max. Freq. Response ▶ 20000 Hz | Voice Coil Impedance ▶ 10 Ohm | Number of Speakers ▶ 1 | Surround sound ready | Max power output ▶ 60W

Subwoofer specs: Voice coil impedance ▶ 10 Ohm | Min. Freq. Response ▶ 100 Hz | Max. Freq. Response ▶ 16,000 Hz | Double Magnet | Max power output ▶ 30W

Connectivity: Bluetooth 4.0 | 2 USB ports | Micro USB | SD Card | Dock comes with wireless charging | WiFi extender up to 30M.

Battery: Lithium-polymer 10000mAh battery | 8 Hours battery life | 60 hours standby.

FODI

Funding as of July 21: CA\$ 59,007 of CA\$ 10,000 goal

FODI is an origami-inspired multi-purpose stand that's both lightweight and at the same time can support up to 20kgs of load. FODI is about as thin as paper at a thickness of just 1mm, but can be used to support your smartphones, laptops, tablets, books, etc.

Since it's so small and lightweight it can easily be stored and carried around for an easy and instant-solution to your 'stand' needs on the go.

FODI comes with two magnetic buckles which attach onto the body. You can pass your cables through these buckles to avoid any tangles. The buckles attach with the FODI without needing any glue or tape. FODI is made out of a polypropylene fibre which is

much stronger than normal paper. The fibre is also water and stain resistant which makes FODI easy to maintain. It's also capable of withstanding high temperatures, as high as 120 degrees celsius. You can check FODI out on Kickstarter.

There are a number of patterns available for the FODI. Apart from the design based ones, there are country specific patterns also available for backers.
