

YouTube video editor

YouTube is getting rid of its video editor and photo slideshows because no one uses them. <http://dgit.in/YouTubeVE>

More characters on Clips

Apple's social video editing application Clips now includes a bunch of licensed characters from Disney and Pixar. <http://dgit.in/ClipsChar>

ASUS Cerberus Mech RGB

Best value for money RGB mechanical keyboard

Price
₹7,100

FEATURES.....57
BUILD QUALITY.....82
VALUE.....90

T

he build quality on the Cerberus Mech RGB feels premium

with its black-matte finish on the metal frame and keycaps as well. The metal frame doesn't scratch easily and only oily fingers will leave fingerprints. The keycaps also have a premium finish but the stem underneath is less dense than the default keycaps found on Corsair keyboards. This might affect the durability in the long run since they tend to wear out over the years.

The Kailh Brown switch has a higher actuation force (60 cN), hence it's heavier than Cherry MX Brown switches (45 cN). Because of the higher actuation force, the switches feel like a cross between Cherry MX Black and Brown. Even though there isn't much of a design difference between the two switches (except the Gold crosspoint), the Kailh variant claims to achieve a higher durability of 70 million keystrokes.

The Cerberus software needs work in design and ease of use. However, you will be able to record macros, change backlighting, and much more. And yes, the keyboard supports RGB lighting. The Cerberus Mech RGB has an incredible price considering its build quality and features. The software does need improvements but primary features such as macro recording and backlighting can be easily controlled right from the keyboard. This can certainly be your first RGB mechanical keyboard if you're ready to spend the amount.

—Abhijit Dey

SPECIFICATIONS

KEYBOARD SIZE: Standard 104-key | KEYBOARD BACKLIGHTING: RGB LED | SWITCH: Kailh Brown | POLLING RATE: 1,000 Hz (1 ms) | KEY-ROLLOVER: Full-key rollover | INTERFACE: USB 2.0 | DIMENSIONS: Width - 44.8 cm, Length - 15 cm, Height - 3.5 cm | WEIGHT: 1.25 kg | CABLE LENGTH: 1.8 m

Jabra Evolve 75 Bluetooth Headset

For when you have noisy neighbours

B

efore we get into the review, let's understand that the Jabra

Evolve 75 doesn't aim to appeal to the audiophiles or the gaming enthusiasts. It's built for the corporate environment where you'd be sitting in a large room with a hundred other people who're all jabbering away all through the day giving you not a moment of silence.

The Jabra Evolve 75 is an on-ear headset which has a sleek matte-black colour tone across the headset and the charger accented with silver strips.

Coming to the microphone, it would have certainly helped if the boom were to be either extensible or have a few more inches to it.

We tried out a couple of tracks with the Jabra Evolve 75, including Yanni - The Rain Must Fall (Live at the Acropolis), Massive Attack - Angel and a couple of EDM tracks which, for the sake of sanity, shall not be listed. The higher notes of Karen Briggs' violin solo in The Rain Must Fall seem to be dampened and identifying the individual percussion instruments wasn't easy either.

The Jabra Evolve 75 is built for the corporate environment and rightly so, as it isn't for audiophiles. It has a pretty suppressed sound signature across the mid and higher ranges but the lower range seems to be pretty neutral. For the purposes of blocking out extraneous noise and making calls, this is a pretty good pair of ANC headsets. However, the pricing seems to be a little too high. So much that it feels prudent to plunk down a few extra grand towards getting the Bose QuietComfort 35.

—Mithun Mohandas

SPECIFICATIONS

DRIVER: 40mm | CUP DESIGN: Supra-aural, closed back | FREQUENCY RESPONSE: 20 Hz - 20 kHz | BLUETOOTH: Class 1 | NFC: NA | BATTERY LIFE: 15 hours | MICROPHONE FREQ: 150 Hz - 6.8 kHz | WEIGHT: 177 g.
