

Motion Stills is finally here

Google's Motion Stills is finally available for Android. The camera app lets users create looping GIFs or fast forward video. <http://dgit.in/StillsDroid>

Redmi phone catches fire

A Redmi Note 4 caught fire while inserting SIM card, phone was replaced but cause remains undertermined. <http://dgit.in/Note4Fire>

Lenovo Legion Y520

Great for 1080p gaming

On paper, the Legion Y520 looks quite interesting and somewhat similar to the

Dell inspiron 7567 we reviewed recently, which means that there is plenty of 1080p gaming performance to exploit. And exploit we did. Like its predecessor the Y700, the Legion Y520 continues the red-and-black gaming theme. And they've pulled it off in a rather classy way compared to some of the competition's tacky exteriors. It's made primarily of plastic, but it is a sturdy machine and easily comparable to entry level Thinkpads.

The laptop misses out on a Thunderbolt port, but limited compatibility of third party graphic ampli-

fiers and the lack of 4K gaming performance on the NVIDIA 1050 Ti makes it a moot point.

One key issue with the Lenovo Y520 is that it locks the Windows key when in game, which is actually a good thing, but if you press it accidentally, the keyboard occasionally locks itself in (Windows

key + X) format. The Lenovo Legion Y520 is a good gaming laptop, with a very severe Windows key issue. Although the Windows key issue is not persistent, if you look past that, the design looks good, build is sturdy and performance is impressive. In addition, battery life is dependable and having an IPS display certainly helps enhance the visual experience. On the other hand, we believe it would have been a more complete package, with a larger capacity SSD. Overall, we would easily recommend this machine to whomsoever is looking to invest on a sub-one-lakh laptop, capable of 1080p gaming.

—Hardik Singh

HUAWEI Honor 8 Pro

A beast on the inside?

The Honor 8 Pro is very attractive and appealing.

Just like flagships of today the smartphone has an all metal body. On the front, the smartphone has a 5.7-inch display with a 2.5D curved Corning Gorilla Glass 3. The bezels on the side of the display are quite thin and the Navy Blue colour just makes the phone pop. Coming to the rear of the Honor 8 Pro, the smartphone has a smooth metal back. It makes the phone slippery, but not as slippery as the Galaxy S8 which has a glass back. The UI doesn't have childish or cartoony icons

anymore, and the number of preloaded themes on the device are enough to give it a more mature look.

Be it multitasking, browsing and heavy gaming, the Honor 8 Pro can handle everything. There were no serious heating issues with the smartphone either. Yes, when you play

a heavy game like Asphalt 8 for a long period of time, the phone does get warm, but that's normal as the metal back is dispensing heat. Overall the Honor 8 Pro is a good device for what it offers. The build and design of the phone is fantastic and everyday work happens very smoothly on the device. The battery life is decent. If there is a downside, it's the viewing angles and overall brightness of the display. The camera performs well in well-lit situations, but falls short in light photography. If you are looking for raw power and a brighter display, then the OnePlus 5 is the way to go. Otherwise, go for the Honor 8 Pro.
