Honor 8 Pro vs OnePlus 5

Battle of the flagship killers

Sameer Mitha | sameer@digit.in

T

he story for every great hero starts with a villain. The more intriguing, dangerous and exciting the

villain, the more thrilling is the journey of the hero and his success. In the story of flagship smartphones, OnePlus emerged as the brand that gives birth to flagship killers. With the OnePlus 5 however, the price of the flagship killer has risen. At ₹32,999, the OnePlus 5 variant with 6 GB of RAM is a great deal, but the success of OnePlus has put another company in an attractive position – that of being a OnePlus killer. We are talking about the Honor 8 Pro. On paper, it brings with it almost every spec and function to take on the OnePlus 5. Will the emergence of a new hero retire the old one for good?

BUILD AND DESIGN

The Honor 8 Pro, has a metal build and an attractive design. On the front, the smartphone has a 5.7-inch display with a 2.5D curved glass and Corning

Gorilla Glass 3 protection. There are no physical buttons below the display. The bezels on the side are quite thin and the Navy Blue colour that we received just makes the phone pop.

When it comes to the front of the OnePlus 5, you could be forgiven for thinking that it is the OnePlus 3T. The smartphone has the exact same front with the home cum fingerprint sensor sitting below the display. On either side of the home button you have capacitive buttons, which can be configured to be the back and multi-tasking button. You can also configure what action will happen if you long press or double tap either of the three (the home button or the capacitive buttons). The OnePlus 5 feels reasonably ergonomic and easy to manage for a smartphone with 5.5-inch display.

The camera lens bump at the back of the OnePlus 5 could perhaps have been avoided, considering we have seen the seamless design on the Honor 8 Pro. It does allow for a better lens to be included on the sensor at the cost of losing out on aesthetics.

FEATURES

The OnePlus 5 has a 5.5-inch 1080p Optic AMOLED display, whereas the Honor 8 Pro has a 5.7-inch LTPS IPS LCD display with a 2560x1440 pixel resolution. As far as resolution is concerned the Honor 8 Pro has the upper hand. But that's not the only thing that matters. The Honor 8 Pro clocks in a maximum luminance of 458 lux whereas the OnePlus 5 does 750 lux. Put side-by-side, the OnePlus 5 has a better display for sunlight visibility. As far as viewing angles are concerned, the OnePlus 5 wins with viewing angles as well.

Both the smartphones run on Android with the OnePlus 5 running on Android 7.1.1 skinned with the company's Oxygen OS whereas the Honor 8 Pro runs on Android 7.0 skinned with the companies on Emotion UI 5.1.

Oxygen OS stays as close to stock Android as possible, but adds a few nifty features, like reading mode where as EMUI has its own UI without an App drawer, but those that miss it can get the app drawer easily.
