Bose SoundLink Revolve+ vs BO BeoPlay A1

Looking to get a portable Bluetooth speaker? We compare two of best in the market right now.

Souvik Das | souvik@digit.in

A

few years back, it may have seemed a bit ridiculous to spend over ₹10,000 on Bluetooth-powered speakers. These portable gadgets were only looked at as good enough for listening to a few tracks

on the go, but not really good enough for audiophiles to savour in the long term. That perception has changed steadily, as the biggest audio makers have come around to building smaller, lighter and better-sounding portable, wireless equipment at increasingly affordable prices.

Here, though, we have two portable speakers that are the result of thoughtful marketing strategies and deep insights into the changing paradigm of Bluetooth speakers in the market. Both featuring 360-degree bodies, the Bose SoundLink Revolve+ and the Bang & Olufsen BeoPlay A1

are positive nods at what the new generation loves. They perform out of their skin to provide commendable audio quality, a host of smart features for wireless devices and combine all of it with premium construction and seamless designing - something that more expensive speakers have always been associated with.

Here, we compare what happens to be two of the most premium portable wireless speakers in India, priced at the lower end of the premium segment. At around the ₹20,000 mark, Bose looks to capitalise on its previous hits in the SoundLink series with a durable, 360-firing speaker. Bang & Olufsen, frankly, gets its first tryst in building something that is remotely affordable with the BeoPlay A1. Hopefully, you are eager to know how these two direct rivals fare? Read on.

BUILD

BOSE SOUNDLINK REVOLVE+

The Bose SoundLink Revolve+ is certainly a well-built speaker, and the heft of its body affirms its quality. The metal unibody chassis does not have any seams thereby being more rigid and sturdy, and the rubberised top and bottom panels do well to add grip and aid button feedback. You also get a reinforced nylon 'handle' that gives it the lantern-like look, and a tripod screw jack at the bottom for mounting on platforms. The speaker feels well built, but the looks can be polarising. We're quite fond of the design.

BANG & OLUFSEN BEOPLAY A1

The BeoPlay A1 is designed by Danish designer Cecilie Manz, and the seamless flow of design and form is commendable. It feels way more premium than any other speaker in the market right now, at least in this category. Even the lower rubber strip is smooth, and you get a wall hanger to make the most of its 360-firing build. It looks more intriguing and impressive than its Bose counterpart, but unfortunately, misses out on durability. This means that while it is better designed, the Bose SoundLink Revolve+ outdoes it in overall build quality.
