

THIS IS TECHNOLOGY, CULTURE AND SCIENCE WITH A DIFFERENCE, AND THAT DIFFERENCE IS USUALLY ENOUGH TO MAKE MOST NORMAL PEOPLE GO "WTF?"

WEATHER WOES

THIS MONTH WE DIVE by into the future with a science fiction story about a world where weather is literally in our hands. Moving on, the DGT section brings to you some of the best products from around the world, some of which we even got to try at the Digit Labs! With Auto, satiate the gearhead in you.

Pet Obesity

According to new health report from researchers at Banfield, approximately, 1 out of 3 pet dogs and cats today are overweight, and these numbers continue to grow. The survey conducted on more than 2 million dogs and about 500,000 cats living across 42 different states in the US revealed a staggering 169% increase in obese cats and 158% in dogs over the past 10 years.

WHAT'S NEW

The font case for Pakistan

There are times when something pretty insignificant assumes a very important role – so important that it might bring down a government. Such is the case of the Calibri font and the Government of Pakistan. In what is turning out to be called #fontgate, officials investigating the financial assets of Nawaz Sharif, the Prime minister and his family, have alleged that his daughter has forged documents to provide fake evidence in the case. And their strongest argument for this? The Calibri font.

Documents dated 2006 which were submitted by the PM's daughter Maryam Nawaz contain the font Calibri. The font wasn't commercially available till 2007. Yes, this does happen in real life too.

Currently, the situation in Pakistan is seeing sufficient support for both sides, with the Defence minister even calling the report 'trash' and 'full of flaws'. While certain early versions of the font were available prior to 2007, even the creator of the font has deemed it an absurd idea for someone to use it before it was released.

One thing is certain – if a font has ever come closest to becoming a national font, this is it.

A KFC phone? Why not?

Who doesn't like fried chicken and smartphones? Well, now you could enjoy them both at the same time. The American fast-food company has partnered with smartphone maker Huawei to release a new phone commemorating KFC's 30th anniversary of doing business in China.

The new KFC edition 'Enjoy 7 Plus' phone was first unveiled

by KFC on its Weibo page. Sporting a signature red color and the very obvious Colonel

Sander's face engraved on the back, the phone does feature decent specs for the price. A Snapdragon 425 SoC, 5.5 inch display, 3GB of RAM, 32GB ROM with expandable memory, 3020 mAh battery and a fingerprint sensor at the back.

Huawei is only making 5000 units of the smartphone to be sold for \$162 (₹10,500).

Over piling garbage

Hong Kong is reportedly running out of space for all its garbage. The densely packed city doesn't have any full-scale recycling plants, and the people generally aren't educated enough about environmental awareness.

Fallout anthology speedrun

A speedrunner beats the entire Fallout series in under two hours. The player by the name of 'tomatoanus' (yup) set a new world record by beating all five games of the Fallout anthology in 1:37:54. Watch the full run here:

Funding space colonisation

Colonising another planet sound a lot more doable today than it might have twenty years ago. But who's going to pay for all the missions? Let's face it: No government is ever going to fund a mission to colonize another planet.
