

Building a flow battery

German energy company wants to build the world's largest battery that could run Berlin for an hour. <http://digit.in/BerlinE>

Power harms the brain

Study shows leaders lose mental capabilities like reading other people accurately after rising to power. <http://digit.in/PowerDeRanger>

Weather update

Weather control is very real, and it is gaining power every day.

Arnab Mukherjee | arnab@digit.in

T

he rain was late today. Jaswinder looked up for the fifth time in the past 2 minutes expecting

to see an overcast sky only to again find it clear as daylight. That's it, he wasn't paying through the nose for unpredictable weather – he could get that for free any day. These corporations couldn't be relied on. He punched in the number for the Eurus help line on his phone.

"Hello, You've reached the Eurus Global Weather control help line. This is Jessie. How may I help you Mr. Jaswinder Sahni?"

"Hello. I had registered for a regular scheduled 11mm of rain on my maize crop, here in Bhatinda. Today's lot was supposed to be here almost half an hour ago, but as I look out, there's no sign of the clouds or any water on the way. Can you please explain why?"

"I see you're enrolled on one of our crop-irrigation packages. We apologise for the delay. As I can see on my dashboard, the drone that was supposed to seed the clouds above your farmland had a delayed start due to maintenance issues and should be there anytime."

"Why don't you send an alternate drone? This isn't the first time I am hearing of this. And I am not paying you \$100,000 a month for delays."

"Sir, we have many more requests coming in to us nowadays, and we are upgrading our drone infrastructure. Our engineers are working on a more

permanent solution as we speak. Right now, I am pinging the location of your drone and it seems to have reached its designated location three minutes ago".

Jaswinder spotted the droplets on his window and knew the issue had been resolved. Other problems could wait for another day.

Jessie put the phone down and looked at the time. It was lunchtime. She made sure there were no incoming calls, while going through the various social media feeds and email accounts of Eurus that she and a number of other executives managed. When she was absolutely sure, she hit the pause button on her keyboard and her system locked.

Arwen, Theresa and Louise were standing in the same place, as always, waiting for her to join them before heading down to the cafeteria. They were the closest to what she could call 'friends' at her office – although they barely spent any time together apart from the 25 minute lunchtime. Arwen was in R&D while Theresa and Louise were in Weather Execution and Client Relations respectively. They took

their favourite seat near the windows when Theresa declared, "I'm done with this job!"

Jessie glared a warning at Arwen who suppressed a smile and then turned to Theresa, "Hey, what happened? Is everything alright?"

"No, it isn't" said Theresa, toying with the food on her plate, "And it can never be. When I joined this company I was so excited about the prospects. But now I see what happens when we go beyond our authority over nature".

Louise jumped in too. "C'mon! Don't tell me those engineers messed something up again?"

"Uh-huh! Flash floods in a small village in eastern China. Nobody died, because the system alerted local authorities immediately, but so much was lost – houses, cattle. And all that because some billionaire wanted just

Cloud-seeding can be ground-based or aerial
