

Ataribox

The Ataribox was first teased earlier this year around E3 2017. The 20-second YouTube teaser video showcased a wooden panel, like the one the Atari 2600 had. They didn't bother providing any other details regarding the product after that. Until recently.

The Ataribox is clearly inspired by its predecessor, the Atari 2600. Like its predecessor, Atari plans to offer classic games through the new Ataribox. But they also plan to offer "current content" alongside the classics.

As for the looks, the new Ataribox looks pretty slick. It features ribbed lines and gently raised contours. There are two options when it comes to the front panel: either glass or wood. On the back panel you have an HDMI port, four USB ports, and SD card support. There will be two Ataribox version to choose from on release, one in wood and the other in black/red.

Atari has chosen not to give away any more information and instead opted to share info step by step while listening "closely to the Atari community feedback" as they go. Smart move.

Super NES Classic

The Super NES Classic or the SNES Classic – which is Nintendo's latest standalone Mini console – will be releasing on the 29th of September later this year. Its predecessor, the NES Classic Edition launched in fall last year and was sold out almost immediately. It has been discontinued and was infamous for being incredibly hard to get.

The SNES is expected to be no different.

Nintendo has announced that the mini console will feature 21 classic games, including superhits Mario World, The Legend of Zelda:

A Link to the Past, Super Mario Kart and more. Interestingly, the SNES Classic will also include Star Fox 2, the sequel to Star Fox from the original SNES which was never released.

The SNES Classic is expected to retail for \$79.99 (₹5,100 approx) but we doubt you'll be able to get your hands on one here. Maybe it's time to reach out to your relatives in the States and be nice to them for a change?

Instax SQUARE SQ10

Fujifilm's instax SQUARE SQ10 is a hybrid camera/printer which lets you print out photos you've taken immediately.

Just one glance at the instax SQUARE SQ10 is enough to see that it's clearly inspired by the Polaroid cameras of old.

Pictures taken by the SQ10 are square shaped as well, with photos coming out in the 1:1 aspect ratio. Definitely something retro junkies would crave.

You can save pictures you take on the camera's internal storage and print your favourites whenever you want. The camera's internal storage can store up to 50 pictures but is expandable via a microSD card. Additionally there are 10 filters for you to choose from to apply on the pictures you take. The camera itself comes with a TFT colour LCD screen so you can edit pictures right on the camera before printing them. In addition to the filters, you can control and edit brightness and vignette as well. The SQ10 has a digital zoom of up to 2.4x, which you can apply to the pictures you want to print as well.

If that wasn't enough, there are different modes for taking pictures as well – from double exposure to bulb and of course plain vanilla standard.

CAMERA

IMAGE SENSOR: 1/4-in., CMOS with primary color filter | **EFFECTIVE PIXELS:** 1920 x 1920 | **STORAGE MEDIA:** Built-in memory, microSD/microSDHC card compatible | **FOCAL LENGTH:** Fixed as 28.5 mm (35-mm format equivalent) | **APERTURE:** F2.4 | **AUTO FOCUS SYSTEM:** Single AF (Contrast-detect TTL, equipped with AF illuminator) | **FOCUS RANGE:** 10cm to ∞ | **SHUTTER SPEED:** 1/29500 sec. to 1/2 sec. (Auto), maximum 10 sec. in Bulb mode | **SENSITIVITY:** ISO 100 to 1600 (Auto) | **EXPOSURE CONTROL:** Programmed AE | **SHOOTING MODES:** Standard, Double exposure, Bulb mode | **DIMENSION:** 119 mm x 47 mm x 127 mm (W x D x H) | **WEIGHT:** 450 g

PRINTER

FILM: FUJIFILM Instant Film "instax SQUARE" | **PHOTO CAPACITY:** 10 prints/pack | **FILM SIZE:** 86 mm x 72 mm | **IMAGE SIZE:** 62 mm x 62 mm | **SUPPORTED IMAGE SIZE:** 800 x 800 dots | **PRINTING LEVELS:** 256 levels per color (RGB) | **PRINTING TIME:** Approx. 12 seconds | **PRINT TIMING:** Printing shortly after shooting/Printing after selecting image | **PRINTING FUNCTION:** Images on built-in memory/micro SD card
