

A new study on microbiome

IBM has launched a study on the human microbiome and its role in autoimmune diseases. <http://digit.in/IBMBiology>

Mysterious Surface Book

Intel recently announced their 8th-gen processors. In the video is a mysterious Microsoft Surface Book. <http://digit.in/IntelSurface>

Feedback for the August 2017 issue of Digit

Send your feedback at editor@Digit.in

Greetings to the people of Digit!

This is my second time writing in to you guys. And as you might know, this mag, for me, is something so wonderful that it would take me hours of talking yet some good aspects might be left out.

The first thing I see is the cover and whoever designs them must be praised for their hard work. The 'Become God' and 'Outsmarted!' issues had some great cover art with so much detail that I spent minutes admiring it before I even opened it. The FastTracks are a really great addition to the package. They serve as a crash-course to any topic and I have a separate collection of them that come to my rescue when I'm in need of in-depth knowledge. And well, its cover helped me learn flat design (Learn Everything, Robotics, etc).

These days I often get asked by friends and family to suggest some good phones or laptops. All thanks to Digit I have always given them the best suggestions. Whenever I got stuck though, digit.in came to the rescue. You guys post those monthly lists of top phones and laptops according to the price range, that is really praiseworthy.

The posters are always awesome and have adorned almost 70% of my room's walls. SKOAR! is something I always enjoy reading and the Kuvah Stories are always interesting. By the way, nice names.

The first thing I read in the mag is the Digit Diary, you guys have such a fun environment that I often feel like I want to work with you guys.

The Tips and Tricks are always helpful and educational and there's always something to learn inside them. When I got to know that my letter was featured as the letter of the month some months ago, I jumped up to the ceiling in excitement and when I read that it was circulated to everyone within the team, I felt so honoured I cannot describe.

In other news, I scavenged my way and found a September 2005 issue and the dvd still works! It's like putting on the retro glasses while reading Digit. It also made me admire Robert's consistent style.

Keep doing the good job! This mag is extremely awesome and nothing feels better than this. Remember that ₹200 bet I told you about? I'm still winning it every time 😊

P.S. My email got hacked and I lost access to it. This happened almost a week after I sent my last email to you guys. I kept on contacting Google and it is now that I got back the control. I want to sincerely apologize to you all, especially Sudhir, for not being able to reply in time. My birthday happens to be on 20th November and to be honest, finding my letter printed in the green box was the best birthday gift ever!

—Rock Cliff

Ahh yes I remember the ₹200 bet – you ask detractors of Digit to spend the same amount on the internet, books or anything else they like and ask them to bring you something equally interesting and unique within a month. I'm glad that so far we've met expectations and you've not had to fork over your hard earned cash 😊

I'm very happy that you've noticed the subtleties in our cover art. Not many do. Anil, Baiju, Peterson and the other designers are on cloud nine right now.

Thanks again for the vote of confidence Rock Cliff. Btw that can't be your real name, can it?

—Siddharth

How about coming out with a FastTrack on Ethereum. I think a lot of people would like a FastTrack on the new cryptocurrency and how to mine it.

—Minhaz Ansari

Too late. The difficulty to mine Ethereum now makes it out of reach for the majority. Only those with custom silicon chips can still find it profitable once you minus the electricity and other overheads. However if you want a general backgrounder on cryptocurrency, we've done a FastTrack on Bitcoin back in February 2014. The basics with any cryptocurrency remain the same, and perhaps the trick lies in getting into the mining pools when the difficulty is low and the popularity is about to shoot up. Check out our online store maybe if you are lucky a copy is still in stock. If not the PDF can be found on our special issue DVDs in June or Dec. Keep writing in.

—Mithun

I like your website.

But I think you should add frequency filters like www.gsmarena.com and make people aware of it. I have a Redmi 3s handset. Their international versions supports all bands. Only in India they have limited it. MI phones specs are great but of no use if it does not support 4g in my circle.

Idea launched its 4g services in Mumbai on band 1 (2100 MHz).

Vodafone 4g in Maharashtra is also on band 1 (2100 MHz).
