

DOES THIS SECTION EVEN NEED AN INTRODUCTION? FROM COMPUTERS TO MOBILES, AND HEADPHONES TO GPUS, IT'S ALL HERE...

TECH-LOVE

THIS MONTH IN TECH: Starting off with the origins of modern amateur astronomy, we also cover a guide on how to become an astronomer yourself. Not all phones are receiving an Android Oreo update, but you can read our guide to get those features on older phones. Let's not forget the monthly set of product reviews and head-ons.

Google to pay Apple \$3 billion

It looks like Google is about to pay Apple \$3 billion to remain as the default search engine on iOS, which, according to American brokerage and research firm Bernstein, is three times higher than the amount Google paid the Cupertino-based company in 2014 for the same.

WHAT'S NEW

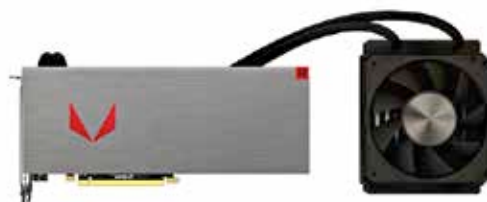

AMD Radeon RX Vega graphics cards

A

MD announced the launch of the company's new Radeon RX Vega graphics cards globally.

It's capable of Rapid Packed Math, High Bandwidth Cache Controller and new Geometry and Pixel Engines to better harness low-level APIs and work well with DirectX 12 and Vulkan. The graphics cards sports a customisable GPU tach meter and LED illumination.

The AMD RX Vega 64 and 56 come with 4096 and 3585 stream processors respectively. The RX Vega 64 has a base clock speed of 1247 MHz and the RX 56 controls a base clock speed of 1156 MHz. The boost clock on both GPUs is

roughly 300MHz more and both use 2048-bit memory bus. This is due to the fact that both use 8GB HBM2 memory interface and have a transistor count of 12.5 billion each. The RX Vega 64 is priced Rs. 54,500 in India, while the price of the RX Vega 56 is yet to be announced.

HP's new Z VR Backpack PC

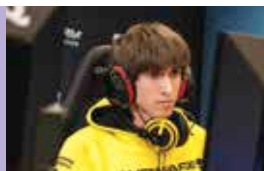

The new Z VR Backpack PC, which HP claims is the world's first wearable PC for VR creators, is powered by a workstation grade GPU. Unlike the Omen X Compact PC (also made by HP) that boasts of Nvidia's 10 series graphics cards, the Z VR features Nvidia's latest Quadro P5200 with 16 GB GDDR5 of memory together with an Intel Core i7 vPro processor which makes it ideal for professional VR developers and engineers.

Backpack computers have been gaining a lot of popularity recently thanks to the success of high-quality VR headsets like the HTC Vive and Oculus Rift. However, all VR backpacks currently available have

been largely focused on VR gaming. HP wants to widen this approach by bringing in a powerful all-in-one machine targeting professional designers. This allows them to work with more conveniently strapped on their backs or across a desktop display whenever they need to. Starting at a price of \$3,299, HP confirms that they will start shipping the Z VR backpack PC in September, 2017.

Autonomous cars? Not anytime soon...

Everyone seems to be claiming that a driverless future is right around the corner. That is true if only the corner is not actually a mile wide and isn't ridden with potholes, jaywalkers and bird shit along the way.
