

MOBILE WATCH

Apple iPhone 8

We've seen plenty of rumours and leaks surrounding Apple's iPhone 8. And it looks like we can expect the phone to release sometime this September.

The iPhone 8 is significant because it marks the 10th anniversary of the iPhone and Apple supposedly has some big changes planned for the iPhone 8. One of those expected changes is an edge-to-edge display with an OLED screen. There will supposedly be LCD models as well. They plan to do away completely with the top and bottom bezels. According to rumours, we might even see facial recognition in the new iPhone. Either way, there will be no home button. Are you excited for the new iPhone?

SECURITY WATCH

LG hit by WannaCry like Ransomware

Around the third week of August in South Korea, LG's service centers were infected with some kind of ransomware identical to WannaCry.

However, LG stated that the service centre network was shut down before the ransomware could do any damage, i.e. encrypt files and demand payment.

Security updates to the affected kiosks seem to have fixed the issue. This could indicate that LG still hadn't patched the Microsoft SMB vulnerability which had caused the spread of WannaCry a few months ago. Or, according to Malwarebytes malware intelligence researcher Jovi Umawing, it could be a new kind of worm similar to WannaCry, which are "constantly scanning the internet for vulnerable hosts."

The moral here seems to be that you should stay up-to-date on your security updates.

APP WATCH

TraveLibro

After a trip, we often end up with a trove of images and videos from multiple locations, eventually becoming unidentifiable or merely a scrollable album on social media. On TraveLibro, you can change that by documenting every step of your journey as it happens on a beautiful interface.

Although you can also document a past journey, updating one live is where this app shines. You can add

your friends to the journey and even they can update the journey timeline with images and videos. This journey can be shared on social media and experienced by anyone as a well-designed timeline that takes the viewer along on the journey as well.

Additionally, you can specify several attributes about yourself as a traveller and the journeys that you undertake. For instance, you can specify the nature of your trip – is it an adventurous backpacking trip with friends or a spiritual weekend with your better half? Do you

prefer travelling solo or are you a group traveller? Information like this makes travelling a truly social experience with TraveLibro.

Once you're at a location, you can even check what are the local interest points, travel facilities and a lot of other helpful information in the Local Life section.

Apart from a few crashes while using it, we didn't really find any reason why TraveLibro shouldn't accompany us on our next journey.

ALSO TRY

GrammarPal

This app can fix your grammar, in any app with the tap of a floating button. Just select the correct alternatives and it will replace the entire text – be it spelling mistakes, punctuation, or even style corrections.

WheelStreet

While there are quite a few established options for renting cars, bikes didn't have the same popularity until recently. And WheelStreet is one of the best services when it comes to that. Give it a shot for your weekend biking needs.

Mirage

An iOS exclusive, Mirage aims to make augmented reality a social experience. It allows you to add AR content like stickers and other media over real life locations, which other users can upvote to be visible for longer than 24 hours.
