

USE PICTURE IN PICTURE

With Android Oreo, Google is bringing picture-in-picture video support to smartphones. While this was already there on Nougat for Android TV, smartphones with Android Oreo will get this feature on apps that offer it. As of now, apps like Google Duo, YouTube and

Whatsapp offer this. To get this for YouTube videos, install Float Tube Video Player (<http://dgit.in/FitTubeVid>) and select the pop icon on any YouTube video to get a floating window that lets you run other apps in the background. The app also lets you play local videos over other apps.

GET AN AMBIENT LOCKSCREEN

While any phone running Android Marshmallow and upwards does support Ambient Display, you need to enable it explicitly. To do that, go to Settings>Display>Ambient display and toggle it. Now, with Android Oreo, you basically get the same notifications in the ambient display, along with the colours and more interactive options. While it may not be

possible right now to get the exact same display on other phones, you can go for AcDisplay (<http://dgit.in/AcDisp>) and get an alternative ambient display screen that allows you to toggle a ton of settings. And while most supported apps are shown in grayscale, certain icons do show up as coloured, that gives it a nice visual touch.

CUSTOMISE LOCK SCREEN SHORTCUTS

With Android O you can customise lock screen shortcuts to include up to five apps that you directly want to open from the lock screen. And just in case you're sad that there's another feature you're going to miss out, it's available on other Android versions by using the Next Lock Screen app (<http://dgit.in/NextLckSc>). Once the app is installed you need to grant it the needed permissions, after which the app will take you to its lock screen. There, swipe up to see the Pick Your Shortcuts option where you can choose up to five apps that you can open directly from the lockscreen. Don't forget to disable your own lock screen from Settings. **4**

THE FITNESS EXPERT FOR A HEALTHY BIKE

SERVO 4T KEEPS YOUR ENGINE FIT

- Protects Engine, Clutch and Gear
- Reduces Maintenance Cost
- Ensures Quick Start and Smooth Ride
- Reduces Engine Stress
