YOUNG DEVELOPERS IN ENTREPRENEURIAL SHOES

Besides solving problems using latest technologies, the Microsoft Imagine Cup 2017 finalists were also tested on their vision and ability to think and approach problems like entrepreneurs and not just developers.

Soham Raninga | soham@digit.in

In its 15th year, the Microsoft Imagine Cup 2017 finals saw students from all over the world competing

and all the more so building and proposing technology led solutions to ingeniously solve some of the most common problems that we face today. We were there to witness some of the brightest young minds from all over the globe donning the entrepreneurial hat to compete and present their solutions for a better world.

WHAT IS IMAGINE CUP?

For the uninitiated, Microsoft Imagine Cup 2017 is all about encouraging student developers worldwide towards solving some of toughest challenges via an annual competition sponsored and hosted by Microsoft. Over the years, Imagine Cup has transformed from being a core developer focused competition to a solution focused incubator (of sorts) that encourages students to take the entrepreneurial direction. They are expected to build and propose a business plan, which makes them work on solutions that are real, practical and sustainable. Sure, they are encouraged to use Microsoft's developer tools and

platforms while also having access to resources and mentoring all through the project life cycle.

The competition has been running for the past 15 years and has seen participation from all corners of the World. This year, for instance, 54 teams from 39 countries were selected as finalists out of hundreds of teams that participated in the competition from across the globe. Three Indian teams made it to the final list of 54 who went to Microsoft's headquarters at Redmond for the final show down. In fact, all three Indian teams also made it to the final 32 (quarterfinals). India was the only country to have 3 teams in the quarterfinals. The Indian march, unfortunately, couldn't advance to the semi-finals. Though, making it to the quarterfinals was a commendable achievement by itself.

THE IMAGINE CUP 2017 WINNERS AND WHAT MADE THEM STAND OUT

The top 3 winners of the Imagine Cup 2017 had razor sharp focus on the problems they were solving and a clear vision on how they'd get there. Perhaps, that's what impressed judges the most and contributed towards their success at the competition.

Team X.GLU from Czech Republic took the top spot and were crowned the winners of Imagine Cup 2017 with their cloud connected smart glucose meter that's been designed especially for children with diabetes. X.GLU focuses on making glucose level measurement and monitoring cheaper, easy

The custom glucose meter designed by the winning team is the thinnest ever in the world and uses no buttons or display, making it cheaper to mass produce and child friendly as well
