

HEXA

Funding as of writing: \$92,796 of \$100,000 goal

HEXA is a compact, six-legged robot that you can easily carry around in your backpack. HEXA is built to be maneuverable in different types of environments and terrains. It comes equipped with sensors to observe the world around it and even learn in the process. The sensors include a 720p camera with night vision, a 3-axis accelerometer, a distance measuring sensor and an infrared transmitter.

HEXA uses Vincross' MIND OS, which is based on the Linux kernel. It's designed and optimised specifically for robots and integrates various different libraries. You

can choose how you want to develop and build the HEXA, making use of either the Golang-powered SDK or a 3D simulator. What you

develop, you can then share on the 'Skills Store', where you can find other user-created skills.

HEXA also comes with an App, which you can use to control the HEXA remotely. The App's Explore mode lets you control it in a first-person view. The App works with both iOS and Android. The HEXA isn't exactly cheap, the lowest pledge starts at \$499 (Rs. 32,000).

SPECIFICATIONS

Dimensions: Height ▶ 4.72" | Width: 20" | **Processor** ▶ Dual-core ARM Cortex-A9 @1GHz | **Connectivity** ▶ WiFi 802.11b/g/n | **Camera** ▶ 720p video shooting | **OS** ▶ Vincross MIND 1.0 | **Battery** ▶ 45-180 minutes with continuous use; 2.5 hour charge wired; 4.5 hour charge wireless | **Storage** ▶ 8GB

ALL Controller

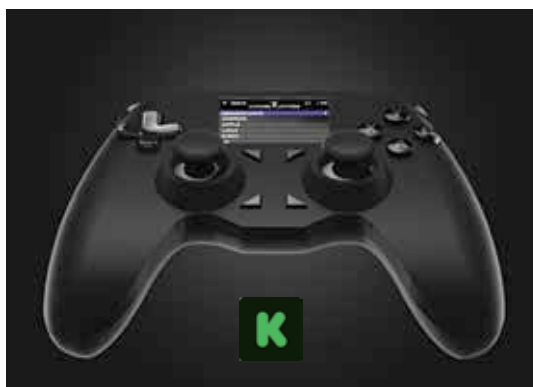

Funding as of writing:
CA\$125,034 of CA\$75,000 goal

Digital Depth Inc., have created what they claim is "The World's First True Universal Gamepad".

The ALL Controller is supposedly capable of seamlessly switching between 11 USB drivers and seven Bluetooth drivers. If that's true then the ALL Controller should easily be able to connect to just about any console and platform out there. We're talking about ONE controller for any PC, Mac, Linux, Xbox, PlayStation, Android or iOS device.

The ALL Controller comes with a USB dongle which also acts as the USB adapter. The USB Dongle has a port on it which allows you to connect it to the ALL controller

via cable. The ALL Controller comes in both wired and wireless variants. You won't need the USB adapter for Bluetooth devices and the ALL Controller can work wirelessly (the wireless variant) with Windows, Mac, Linux or mobile games. The company plans to add support for Nintendo's consoles as well, including the Wii, WiiU and Switch.

The ALL Controller allows profiles to be saved on it and loaded when needed. The controller has an LCD built into it to make the process easier. You can use this interface to create macros and change button mapping, no external app or software needed. Furthermore, the ALL controller comes with built-in keyboard/mouse drivers which lets you play games which would otherwise not be controller compatible usually.

The ALL Controller supposedly has 40 hours of battery life. That's 40 hours of non-stop playing. Which makes it a beast if that's true. The wired variant is going for CA\$55 (Rs. 2,780) while the wireless variant starts at CA\$80 (Rs. 4,045).

QLYX

Funding as of writing: USD 62,220 of USD 40,000 goal

The QLYX is a magnetic smart car mount. It attaches to an NFC enabled Q-Plate which you attach to the back of your phone. It automatically launches the QLYX app the moment you attach your phone to it. The app is compatible with Android and iOS, and has a host of handy driving-assistive features. Some features on the app include traffic data, driving statistics, and weather forecast among others. The QLYX mount is also capable of auto-launching other apps such as Spotify, Apple or Google maps and more. The QLYX app is designed to provide easy access to features and provide as little distraction as possible when driving.

The NFC compatible Q-Plate is just 0.5mm thick and is made of 'electric steel'. This allows them to be both thin and have magnetic properties which lets it attach to the mount. QLYX's battery can power it for upto two years with four hours of daily usage, and the mount can be paired with more than one smartphone.

The 'QLYX light' variant, which is a non-smart version, starts at \$18 (Rs. 1,145) while the QLYX starts at \$33 (Rs. 2,100).
