

Age of Empires IV

More than a decade after Age of Empires III was released, Microsoft Studios announces the new Age of Empires IV is coming. <http://dgit.in/AOEIVnew>

best that you return your router and get a better one that can handle more clients. I don't know what budget you are looking at but the Xiaomi Mi 3C is a pretty good budget router.

PHONE FOR ₹20K

Q Hi Digit, I'm looking to buy a phone. Need it for work and personal use. The camera should be of high quality as I like to click pictures on my travel and also the selfie cam should be good. I'll need good storage space and RAM that can manage 30-40 apps. My budget is Rs. 20,000 and I'm open to all brands as long as the phone is durable.

—Salome Abraham

A The Honor 8 Pro seems to be the right choice. It was more expensive at launch, but the price has dropped since and is under 20k now. It fits the bill for most of your needs, but the glass body isn't particularly durable. If durability is absolutely imperative, then the Moto G5 Plus is a better choice. You'll get a good camera, performance and a decent selfie shooter too.

Honor 8 Pro

NEED MORE CORES?

Q Hey Digit, I've started seeing quite a bit of chatter around different multi-core CPUs being announced by AMD and Intel in the last couple of months. My PC is running an Intel Core i7-3770K at the moment with 8 GB of RAM and a GTX 970. Should I move to one of these 8-10

Core CPUs? I can feel quite a bit of sluggishness in some of the applications that I run on a daily basis, so I'm thinking it's for the better. What do you say?

—Hariprasad G

More cores?

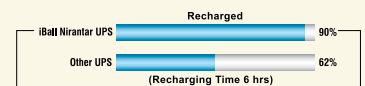

A You have a pretty good configuration even for today. The 4-core HyperThreaded Intel Core i7-3770K isn't a puny processor by any means. And adding more cores isn't simply the answer, the programs need to be capable of using the extra cores as well. While you haven't mentioned it, I'm assuming you do have an SSD, if not, get one. Also bumping up the RAM will certainly help because the sluggishness appears to be because of the slow rate at which data is being pulled into the RAM. Those applications which you have minimised for a long period will get dumped into the page file. It's when they're accessed again that the memory frames from the Page File are pulled back into the RAM. If you have more RAM in the first place, the reliance on the Page file goes down a little. The other thing I'd advise is getting an All-in-one liquid cooler to help you get started with overclocking. Again, I'm assuming you have a Z77 board. So once you have the new cooler plugged in, simply boot into the BIOS and bump your core clock multiplier to x40 and get your CPU clock to 4.0 GHz. The higher clock + SSD + more RAM should offer you a significant bump in performance. Moreover, the SSD and AIO liquid cooler can easily be used for future upgrades since most coolers do come with brackets for different mounts. **[E]**

RICHARD MAY NOT **BE READY** BUT
iBALL **NIRANTAR UPS** RECHARGES
33% FASTER THAN ANY
STANDARD UPS

Express Recharge.
High Performance.

iBall Nirantar UPS
bAll NO LOSS. BOSS!

Only iBall Nirantar UPS gives you that extra backup facility
(Faster recharging makes it ready for extra backup in less time)
