

SpaceX's new spacesuit

Elon Musk released the first photos of SpaceX's new spacesuit and it looks like it's straight out of a Sci-Fi movie. <http://digit.in/XSuit>

YotaPhone is back

The YotaPhone 3, features a 5.5-inch 1080p Super AMOLED display, and 5.2-inch E-ink display on the back of the phone. <http://digit.in/YotaPhone3>

BlackBerry KEYone

The "key" to BlackBerry's revival?

One look at the device and you know this is a BlackBerry smartphone. The device has a textured faux leather feel to it, which not only makes it feel premium but also allows better grip. The space bar doubles up as the fingerprint sensor and is very fast and accurate. No complaints here.

The keyboard is a pleasure to type on once you get used to it. It has a bunch of nice tricks, for example, when you are reading a document or browsing a website, you don't need to use the touchscreen to scroll. The keyboard doubles up as a touchpad too. You can also assign long press and short press shortcuts to the keyboard. This means that you have 52 shortcuts at your disposal from the keyboard.

Price
₹39,990

Display

The 4.5-inch display has a resolution of 1080 x 1620 pixels, giving it a pixel density of 433 ppi. The aspect ratio is fine when you work in portrait mode. Switch to landscape and you see ugly black bars on either side. Playing games such as Asphalt 8 becomes annoying because of them. It doesn't help that the speaker is located below the keyboard so when you use the keyboard as a grip, you end up muffling the speaker. The display has a peak luminance of 541 lux, which isn't the highest in this price bracket, but the display is bright enough for both indoor and outdoor usage. The viewing angles though could have been better. The colours produced on the display are crisp and vibrant and look good.

cuts to the calendar, mail, contacts and more. The multitasking menu also arranges the apps in a tile format rather than cards, as is found on stock Android.

DTEK and security

Being a BlackBerry device, the KeyOne boasts of

security features but it isn't something we haven't seen in the past. DTEK is BlackBerry's security app and it shows you what app is using what permission in the background and also how secure your device is. Similarly, if you haven't set a password, pin or fingerprint, or haven't updated the security of the device then the DTEK app will certainly prompt you.

Camera

The rear camera on the BlackBerry KeyOne is a 12MP unit. In daylight, it takes good photos and captures both details and colours. The white balance though wasn't accurate in some cases. In low lit conditions, however, the

performance of the camera is average at best. The front facing 8MP camera also clicks decent selfies in daylight although there are better selfie smartphones available at the same price.

Performance

The device is smooth for the most part, but there are occasions when you will see it freeze or lag for a bit. But these moments are far and few to complain about. We watched a bunch of videos on it, played some Asphalt 8 and Fast-lane, wrote some stories and browsed the web, checked email and spent some time with the BlackBerry Hub too. For all this, the phone worked well.

As a productivity device, you will be happy with this phone and the keyboard is a boon. It's when you switch to the entertainment side of things that the keyboard feels like a hindrance. The KeyOne also runs on the Snapdragon 625 platform, which is disappointing at this price point.

Battery Life

When it comes to battery life, the device lasted for 10 hours and 33 minutes in our PC mark battery test, which is pretty good. In real world use, the battery lasted for a day with ease. But add quite a bit of gaming to the mix and you will need a charger by 6 PM.

Bottom line

You have devices like the LG G6, iPhone 6S and OnePlus 5 at the same price point, and they all offer a better camera, display and other hardware. With the KeyOne, BlackBerry is looking to attract the audience it once had. What remains to be seen is whether they leave their current device to reignite old flames.

Software and UI

If you have used the BlackBerry DTEK 50 or 60 in the past, then you should feel at home with the UI. Swiping from the edge of the display reveals short-

SPECIFICATIONS
