# LG Q6

## Radical, but not revolutionary

**T**he LG Q6 carries the same Full Vision display as seen on the LG G6. Kudos to LG for bringing their flagship tech to the budget segment.

### Display and Design

The display rocks a 2160 x 1080p resolution, which takes the aspect ratio from the standard 16:9 to 18:9. In tandem, the top and bottom bezels have been drastically minimised. This means, the LG Q6 with its 5.5-inch display, is just a hair bigger than the 5-inch Lenovo Z2 Plus. As for the display quality, it is a top notch panel and can easily be regarded as one of the best in the category. Viewing angles are very good and the colour saturation, though a bit warm, is favourable for viewing all kinds of content. It is easily viewable outdoors and under direct sunlight thanks to a luminance readings of 605.

### Build quality

LG claims that its H-beam chassis is more than capable of handling those occasional bumps and drops. The frame itself is made out of 7000 series aluminium, i. e. aerospace grade. Although, to put it relatively, that has been used in smartphones for ages.

The edges are metallic and rounded, which makes the phone easier to grip. While Gorilla Glass 3 protects the display from scratches, the plastic back gets scratched quite easily.

### UI and features

LG hasn't changed its UI significantly in terms of design and functionality

since the LG G6. So, you still get a very colourful interface with no app drawer. In addition, LG has duplicate apps for almost all Google apps, which seems unnecessary. We're

disappointed to see that the device does not feature a fingerprint scanner.

However, the Q6 comes with a "face unlock" feature, that works, but is a little slow for our liking.

### Performance

While the face unlock is slow, the performance of the phone itself is slower. Powered by the Qualcomm Snapdragon 435 SoC and 3GB of RAM, the LG Q6 can barely keep up with the competition on synthetic benchmarks. That being said, if you are not into heavy gaming or

don't use processor intensive tasks, such as video editing apps, then you would find the overall experience of the phone good enough.

The only time we had issues with the performance was when we played games like Injustice 2 and Vainglory on it. The phone kept stuttering and one could see noticeable frame drops throughout the gameplay.

4G connectivity is also good and the Q6 supports dual VoLTE SIM cards slots. It also features a dedicated external memory card slot in extension to the 32GB internal storage. The speaker on the back side could have been louder, but we do find the audio quality via headphones decent.

### Battery life

The LG Q6 brings a 3000 mAh bat-

tery to the table, which is good enough for normal users. There is even a "game battery saver" mode, which adjusts the battery consumption and extend battery life. Although, that is something you won't need, as you can't really game on the phone. The device scored 5 hours and 1 minutes on the PCMark benchmark, which isn't exceptional, but still workable, as the phone lasts a day easily even if you're a heavy user.

### Camera

The rear 13MP camera on the LG Q6 is also just about good enough. Images taken in all lighting conditions look rather subdued, but have ample details and sharpness. Apart from panorama and food mode, the phone doesn't really let you tweak settings further.

There are the usual filters and you can switch between auto mode or LG's own square mode, which it introduced with the G6. The front facing 5 MP camera also has the wide angle and normal selfie camera modes, taken from the G6. The image quality here is again just good enough, with softer focus, cleaning blemishes and dark spots.

### Bottomline

The Q6 now sets the precedent for how a sub-15K smartphone should be designed. The LG Q6 goes against the likes of Moto G5 Plus, Xiaomi Redmi Note 4, Honor 6X, Samsung Galaxy On Max and more. All these smartphones offer better gaming performance, but offers pretty much the same day-to-day performance. All things considered, the LG Q6 is an all rounder. It a jack of all trades, but master of none.

—Hardik Singh

### SPECIFICATIONS

SOC: Qualcomm MSM8940 Snapdragon 435 | GPU: Adreno 505 | OS: Android 7.1.1 (Nougat) | CARD SLOT: microSD, up to 256 GB | DISPLAY TYPE: IPS LCD | SIZE: 5.5 inches | RESOLUTION: 1080 x 2160 pixels | CAMERA PRIMARY: 13 MP, f/2.2, autofocus, LED flash | CAMERA SECONDARY: 5 MP, f/2.2, 1.12 µm pixel size.
