

Doom 2 to Diablo II

Youtuber DoloM has created a new mod for Doom 2 which gives players an isometric ARPG-style view like Diablo II. <http://dgit.in/Doomdiablo>

Locomotion in salp

A study of salp's aggregate teamworking lifestyle might help unravel the complexities of designing underwater vehicles. <http://dgit.in/SalpVehicle>

Infinix Note 4

Doesn't match up to competition

You're spoilt for choice in the sub-10k price segment and the Infinix Note 4 just joined the fray. The Infinix Note 4 runs on Android Nougat straight out-of-the-box, and the company's own XOS 2.2 overlaid on it. The UI itself doesn't bring anything that we haven't seen before, but does come with a bunch of preloaded apps.

The front camera, it softens the image a bit, which makes selfies look good. There is a front facing flash too, for low light conditions, but don't expect the world from it. The rear camera is a 13MP shooter and for well-lit situations it gets the job done. There are times when images in well-lit situations appear overexposed so you may want to carefully choose your focus points. When it comes to everyday performance, the smartphone shows noticeable lag, especially if you have a bunch of apps open.

Coming to the battery life, this is where the smartphone does well. It has a 4300 mAh battery, which lasted for almost 11 hours on the PCMark Work 2.0 test. If you are a light user, you can look at more than a day and a half worth of battery life.

The Infinix Note 4 is a run of the mill Android smartphone. It has a good display, good battery life, an average camera, and that's about it. Sure, there is a dedicated microSD card slot if that's something you are looking for, but if a holistic smartphone experience is something you are looking for and have a budget of under 10k, there are better value for money devices available in the market.

—Sameer Mitha

SPECIFICATIONS

SOC: Mediatek MT6753 Octa Core 1.3 Ghz | GPU: Mali-T720 MP3 450 MHz | OS: Android 7 (Nougat) | CARD SLOT: microSD, up to 128 GB | DISPLAY TYPE: IPS LCD | SIZE: 5.7 inches | RESOLUTION: 1920 x 1080 pixels | CAMERA PRIMARY: 13 MP, autofocus, LED flash | CAMERA SECONDARY: 8 MP, 1.12 µm pixel size | BATTERY: 4300 mAh.

InFocus Turbo 5

Big battery, not much else

While manufacturers try in myriad ways to increase battery life, the most simple and straightforward method is to fit a bigger battery. With the Turbo 5, Infocus has taken this route.

Infocus has opted to go with a plastic build for the Turbo 5, with faux metal finish and the issue is that the device creaks when you pick it up, suggesting loose panels.

The device is quite slow with a noticeable lag, even when typing. The images taken by the rear camera have vibrant colours, but are consistently soft. As a result, the details are low. This problem worsens in low light conditions.

The InFocus Turbo 5 delivers impressive battery life and the fact that it comes with Android Nougat is something many other manufacturers should aim for. However, the poor performance of the phone and bloatware filled UI is something we do not like.

The most direct competition is the Xiaomi Redmi 4, which offers a 4100 mAh battery. In the PCMark battery test, the InFocus Turbo 5, which ran for about 16.5 hours, outperformed the Xiaomi Redmi 4, which ran for just over 15 hours. However, in terms of performance, the Snapdragon 435 on the Redmi 4 easily outperforms the MediaTek MT6735 SoC used by Turbo 5. Further, it also offers a metal body and a better build. In fact, the cheaper Xiaomi Redmi 4A, which sports a Snapdragon 425, also outperforms InFocus' phone. Overall, the current segment leader, the Xiaomi Redmi 4 is a better device overall, and is no slouch in terms of battery life either.
