

Xiaomi's Mi Mix 2 render

The latest teaser video of Xiaomi's Mi Mix 2 looks absolutely stunning putting the Galaxy S8 and iPhone 8 to complete shame. <http://dgit.in/MiMix2>

Henrik Fisker's Tesla competitor

The EMotion luxury sport sedan, will be a \$129,000 Tesla competitor featuring level 4 autonomy and 400 miles of range. Learn more: <http://dgit.in/EMotionCar>

Still a pain

A celebration is in order since Apple has finally decided to make use of Philips screws in some parts of the chassis. However, like all previous iterations of Apple's iDevices, even the 10.5" iPad Pro makes use of copious amounts of adhesive to hold the entire thing together. Fortunately, you can use VHB (Very High Bond) 3M adhesive as a replacement.

Apple
iPad Pro 10.5"
w/o Wi-Fi

Bandwidth hog

The 120 Hz screen of the iPad Pro 10.5" requires a massive amount of data bandwidth and then you have True Tone technology which takes it up even further. Overall, you have 4 connectors for the display and the digitizer.

64-bit goodness

Apple's A10X Fusion chip is one of the best performing SoCs for tablets. It's a pity that only Apple gets to use it. The iPad Pro 10.5" is practically this one mainboard.
