THIS MONTH WE DIVE into how our lives revolve around subscriptions and how there's a subscription for just about everything. Moving on, the DGT section brings to you some of the best products from around the world, some of which we even got to try at the Digit Labs! With Auto, satiate the gearhead in you.

Sharing data on mosquitoes

For decades, American biologists have been collecting data from millions of mosquitoes, creating an incredible trove of information. However, all that data isn't in the same place, and only a small fraction of it is public.

WHAT'S NEW

Storing 2 million gigabytes of porn

When companies offer unlimited storage plans, does unlimited really mean limitless? This is exactly what Reddit user [beaston02](#) was determined to find out when he decided to push Amazon's cloud storage plans to its limits.

The Redditor archived over 1.8 petabytes of porn to test Amazon's 'Unlimited' cloud storage. For reference, one petabyte is equal to one million gigabytes. And to gather all the data, the proud hoarder wrote special scripts that would automatically record public webcam shows from variety of adult cam sites like Chaturbate, MyFreeCams, CamSoda, etc.

If you were wondering how long it would take to consume 1.8 petabytes of porn, here's the math - 1.8 petabytes in 720p is roughly 2GB per

hour, and at 900,000 hours, that's 102 years. If the quality is even lower, say 480p, then that would be about 293 years and six months of straight calendar time.

Skyscrapers made of wood

Architects are working on a new kind of high-rise structure built entirely out of wood on a site along the Chicago River.

Up until late 19th century, timber was still the most dominant building material. However, that changed after a series of brutal city fires broke out across major cities in the US. But thanks to many new

innovations like cross-lamination and CNC milling or even its environmental properties have

started encouraging architects to built structures at heights unimaginable a century ago.

Today, the tallest building made of timber is an 18-story dormitory called Brock Commons in Vancouver. The building looks very similar to any steel or concrete building, however, it is entirely made up of wooden modules.

Sex education in animals

All animals have a powerful 'sex drive'. But for all other animals, sex is just sex. Did you know that humans are the only species that understands 'sex makes babies'? And could this knowledge be the cause for the change of course in human history?

Origins of playing cards

Playing cards have been known and used for centuries. From the early Chinese "game of leaves" to the French's "carte à jouer", today, cards are used for gambling, divination, magic tricks and even commerce. But where do they originally come from?

Win \$1 million from Coca-Cola

The popular soft drink company launched a "sweetener challenge" on its HeroX crowdsourcing platform offering a grand prize of \$1 million to anyone who can find an alternative to sugar which can be safely used to sweeten food and drinks.
