iFixit Pro Tech Toolkit

"It just works."

If you're like one of us and have this weird urge - akin to an addict looking for his next fix - to take apart each and every gadget you come across to take a peek inside and understand its workings, then you need an arsenal of tools to help you along the way. Most of us have, over the years, improvised and built our own little tools such as the filed credit card for splitting plastic tabs open or the notched screwdriver to keep panels from clamping themselves shut automatically. The downside to these approaches are that often we need to add a teensy bit of customisation for each new thing that we try to take apart. Let's talk about the filed credit card again, the plastic used in credit cards are so soft that they wear down very quickly. So you need something thin to slide into a crevice and it has to be hard so that it doesn't wear out. The iFixit tools are the result of the learnings of hundreds of such disassembly attempts. And the iFixit Pro Tech Toolkit puts together some of the most useful tools you'll ever need for your next disassembly.

The Pro Tech Toolkit is the second best offering from iFixit, the best being the Repair Business Toolkit which has

a lot more bits and tools aimed at commercial establishments. The Pro Tech has several components, you have the anti-static wrist strap, a suction cup, multiple plastic prongs for opening, multiple plastic tabs for opening, two tweezers, a reverse tweezer, a jimmy, two spudgers and a 64-bit driver. The driver also has a flexible extension as well. What's even better is that the contact points have different materials as well, so you can pry something open

with plastic or metal, you can use metal or plastic to hold components together should the situation call for either material. It's this flexibility of usage coupled with quality that makes the iFixit Pro Tech Toolkit a must have for every enthusiast.

Price: \$59.95

SPECIFICATIONS:

TOOL ROLL DIMENSIONS (FOLDED): 8.4" × 7.6" × 2.8" | **TOOL ROLL DIMENSIONS (FLAT):** 22" × 7.6" | **TOOL ROLL MATERIAL:** Polyester Canvas | **WEIGHT:** 1.5 lbs | **4 MM BIT MATERIAL:** 6150 Steel | **BIT DRIVER MATERIAL:** Anodized Aluminum | **BIT CASE MATERIAL:** Recycled ABS | **BIT CASE FOAM MATERIAL:** EVA

Steelcase Gesture

The Steelcase Gesture chair is not a smart chair per se, which is to say that it does not have Internet-enabled bearings that you can control from an app. Instead, it's designed to adapt to body posture, sitting style, and all the necessary essentials for comfortable seating.

The adaptive backrest of the Gesture forms the 'Core' of the chair - a highly adaptive cushioning that moves in tandem with the seat itself. It takes into account your natural back posture, and the smooth sliding mechanisms adapt to how you sit, and this in turn gives you maximum support.

Then follows the 'Limb' - the armrests that have multiple adjustments to find the perfect height and angle for you

to rest your hands on. This is meant to give you the perfect balance to keep the muscles at rest and keep your shoulder in proper posture.

The 'Seat' itself is also further adjustable, to ensure that you get ample thigh support. All of these come with manual adjustments, so that you can tweak every single bit of the Gesture chair. Steelcase aims to strike the right balance here, between comfort and a healthy posture.

Price: ₹85,000 approx.

SPECIFICATIONS
