

**HP's new workstation PC**

HP's new workstation grade Z8 personal computer features Intel's 8180 processor with 28 cores/56 threads with 3 TB memory. <http://digit.in/HPZ8pc56>

**Bose QuietComfort 35 II**

Bose QuietComfort 35 II will be the first to feature built-in support for Google Assistant. Expected to launch soon. <http://digit.in/BoseQC35II>

Feedback for the September 2017 issue of Digit

Send your feedback at editor@digit.in

Hello Siddharth, I just finished reading your article titled 'The Era of digital privacy'. I found my insecurities echoed in your words. The insecurity I feel when I share my personal information like full name, contact no. etc. Also when I share my phone contacts, preferences, my wishlist... it just gets too personal. It's just too easy for people to find personal data about me. I do feel that we take this too lightly. We need rules, more rules. Maybe, we already have the rules, but need a better implementation? This article grabbed my attention and I read it from start to end. Thanks for the meaningful insights.

—Ashish Tanwar

Thanks a lot for your kind words, glad you liked the editorial.

Yes, hopefully we'll get some better implementation soon and a new culture will be fostered where digital data is treated with the respect it deserves.

—Siddharth

I live in Kota, and our private hostel is taking biometrics and facial recognition data for attendance. All of us students living in Kota have given out biometric details at some point in a hostel or in coaching classes. Do you think this is OK, or should we protest this?

—Sarthak Tiwari

Personally, I don't think there is cause for worry. Technically speaking, if there is scope for misuse, then yes, it can happen. However, is it likely? I don't think so. We must think about why someone would want to misuse biometric data of students, and to what end? There are no real gains to be had.

Like I said, hopefully soon enough we'll have better standards and guidelines in the country for handling biometric data. Until then the convenience far outweighs the remote possibility of misuse.

—Siddharth

I want to do my internship with Digit. How should I apply?

Ankit Ganguly

Just send your CV or desire to intern to editor@digit.in, tell us the time period, and specify what you want to do when here (write, review, copy edit, design, etc.), and what location (Noida or Mumbai). We'll get back to you with a basic aptitude test, and then decide if you're eligible.

—Robert

I am a senior in high school in Delhi Public School, R. K. Puram, New Delhi. I am a big fan of Digit and I wanted to write an article for it. I am proficient in written English and I secured 28 in TOEFL writing. I am a

member of my school's computer club and have won many quizzes in and around my city. I am also a Global Grand Prize Winner of Google Code-in 2016.

I am avid reader and big fan of Digit and your writing style. I am passionate about technology, especially smartphones. I'd like to write an article on Project Treble, one of the most revolutionary features of Android Oreo.

Android is arguably the most influential mobile operating system in the world, and the flagships are taking the iPhone head on. Android flagships match the iPhone in every regard except software updates. Flagships, even Samsung's flagships usually get updated to the latest version of Android months after a new version is released. Google is trying to address this with Project Treble – one of the new major features of Android Oreo.

Software updates in the final piece of the puzzle and is something that makes people choose iPhone over the equally powerful and more modern Android flagships. Also, Android flagships rarely get new updates for more than two years, whereas the iPhone 5S is still supported by Apple. This is one of the reasons for the low resale value of flagships. Project Treble hits multiple targets with a single bullet and may turn out to be the best feature of Android Oreo.

A little about myself, my hobbies include programming and reading non-fiction books. I have completed grade 3 in Music theory, and am the president of my school's quizzing club.

—Sudhanshu Agarwal

I must say you've racked up a lot of accolades at a young age. Kudos for that. And yes it's an interesting topic. We were considering writing a story on Treble ourselves. We have a section in the magazine called community, which is designed exactly for aspiring writers such as yourself. Send us your article.

—Mithun

Hey, remember me? I just wanted to let you know that an increasing number of cabinets don't even have slots
