WHAT'S NEW

Apple's September event 2017

Apple held its annual iPhone-centric event on 12th September 2017, and here's everything the company announced during the two-hour event:

- **iPhone 8 & 8 Plus:** The two iPhones are powered by the Apple's new A11 Bionic processors and sports a rear glass panel that enables Qi wireless charging. The phones will be available in the usual black, silver, space gray and gold colors and launch in two - 64GB and 256GB variants.

- **Apple Watch Series 3:** The new third-generation Apple watch finally brings LTE connectivity to wearables and also features a barometer altimeter for stair-counting.
- **Apple TV 4K:** Powered by the A10X Fusion Chip, the new Apple TV 4K brings a huge upgrade in the product line with 4K and HDR compatibility and also support for Metal 2 API.

- **iOS 11 and watchOS 4:** First announced at WWDC 2017, iOS 11 brings in new features like the Files app, drag-and-drop, updated Control Center and more. While the new watchOS 4 brings in improvements in the activity tracking and heart monitoring software,

- features an updated Workout app and also includes a new Siri watch face.
- **New campus first look:** The event also gave viewers a first look inside Apple's new multi-billion dollar futuristic headquarters. The entire campus is 100 per cent powered by renewable energy and Apple also emphasises on how the structural design is one with nature.

- **One more thing....:** Commemorating the company's 10th anniversary and the showstopper of the evening was however the launch of Apple's brand new iPhone X (pronounced iPhone Ten). Featuring an edge-to-edge OLED display (which Apple calls Super Retina) and a new kind of facial recognition technology enclosed in a brand new hardware design.

WhatsApp is killing SMS

WhatsApp is planning to release a new WhatsApp for Businesses that will allow multiple executives of companies to use the same account for communicating information like OTPs, Promos, booking confirmations, etc, with their customers.
