

FILL LETTERS

Among the Canva elements, there are a lot of options that are unique. But one is particularly useful if you're trying to get some unique

text onto the canvas. In the elements search box, type 'Letters' to get a bunch of frames shaped like the alphabet. Now, use them in your design and fill them with images of your choice to create interesting patterned text like this: <http://dgit.in/TxtFill>.

Free! Free! Free!

available only to photo-editing experts, filters have brought complex and multilayered post-processing abilities in the hands of every smartphone and desktop owner. And they are also available on Canva.

Click anywhere on an image on your canvas (only applicable for images, not other elements) and in the floating popup menu, select 'filter'. There are quite a few options along with sliders for brightness and contrast. To keep filters consistent across your images, use the filter code available on the bottom right to keep filters consistent across your images. This will work even if you've gone into the Advanced section and played around with more than just the brightness and the contrast, making it a very useful tool to master. And copy this code to apply your own custom made filter to a bunch of

images across your social media profiles or pages.

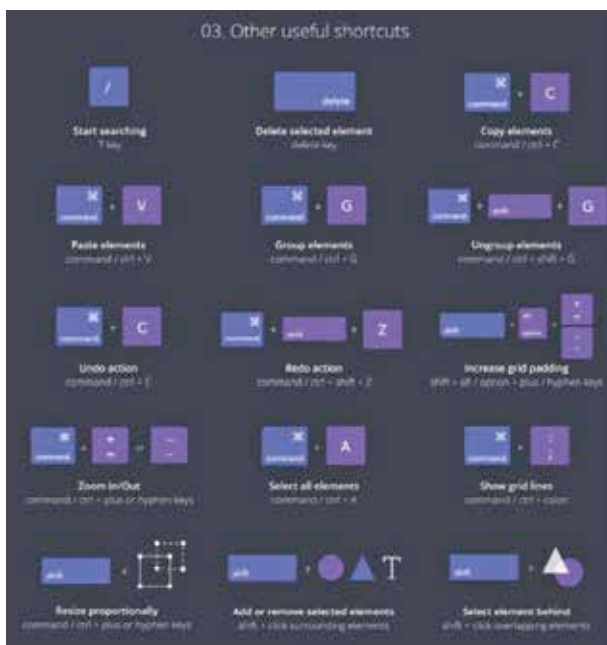

BROWSE ONLY THROUGH FREE DESIGNS

While Canva does have a lot of free options when it comes to graphics and elements, it still does have paid elements as well. And it can be pretty frustrating when you're looking for something specific among the free options and almost all that shows up is paid. To avoid that, when you're in the elements tab, type brand:BAAAAP7rQ8M into the searchbox and hit Enter. All the free elements within the app will be filtered with this and presented to you on the left panel.

DESIGN ON YOUR PHONE

Despite all its good features, Canva will let you down on one front - the Android smartphone. While there is an app available for App Store, a counterpart for Android isn't out there yet. This is where Desygner comes in. While its web app is almost identical to that of Canva, with a couple of additional features like a ruler. And with its mobile app, Desygner offers the same utility on your Android smartphone as well. So stop reading and get creative already! 

03. Other useful shortcuts

Shortcuts – shortcuts everywhere!

OTHER USEFUL KEYBOARD SHORTCUTS

Apart from the shortcut-based tips above, there are a bunch of other useful keyboard shortcuts that can make this already easy-to-use tool even more handy. Check out these shortcuts at <http://dgit.in/CnvaShrtcts>. For instance, in Canva, you can press T any time to create a textbox. And "Ctrl+:" will toggle gridlines which help you with aligning objects properly across the entire work area.

USE FILTERS - AND KEEP THEM CONSISTENT

Filters have become an inseparable part of a social media experience. Once

Using the same filter for all graphics can help maintain a brand image
