Hidden game in Switch

Every Nintendo Switch appears to have a fully playable hidden copy of NES Golf. <http://dgit.in/SwitchGolf>

Video Editing on your smartphone

Today, smartphone cameras have improved to the extent that for most of us, it has become our primary shooting device. However, if you need to create a film, compile clips together or perform other video editing related tasks, you are mostly obliged to use a computer to do so. Video-editing is one of the heaviest tasks that a device can perform and it requires a lot of processing power, RAM, tons of storage and also proper expertise to make it work. Even though our current generation of smartphones sport quite impressive specs, they still fall short of the kind of firepower needed to run professional tools like Adobe Premiere Pro or Final Cut Pro. But there are plenty of smartphone apps that allow you to perform basic editing like stitching together multiple clips, colour grading, editing audio, or adding decent effects that are good enough for most use cases. Here, we list out our picks for some of the best video editing apps for your smartphone and how to use them.

01 QUIK

If you are looking for a quick and simple application that saves you the trouble of editing and does most of the work for you, Quik Video Editor by GoPro is the app for you. All you need to do is select your favourite images and video clips from your phone, pick a soundtrack and style, and the app will automatically analyse and create a short video for you, synced to the beat of the music. You can also customise further and add transition effects, text, music, adjust speed and more with ease.

Similar to Google Photos, Quik can scan your phone's gallery and automatically suggest videos to be created every week before you even ask it to. It's like having a dedicated video editing professional for your personal clips.

Running a YouTube channel with just your phone?
