Nokia 6

Not worth your money

The Snapdragon 430 is a chipset that gives you just enough and saves the company just enough as well. It's far from the snappy and sometimes uber fast budget smartphones we get today. The Nokia 6 loads apps slowly and it lags one too many times.

The Nokia 6 is built like a tank that has glass on top. There's little to worry about as long as you don't drop the phone screen first. Having said that, the Nokia 6 has sharp edges that dig into your hands. The Nokia 6 is a durable, well built smartphone that can take on the best in the market, at least in terms of build and design. It's built better than most phones out there, but it has some budget elements to it as well. Gun to my head, if I had to choose the Nokia 6's best feature, it would be the design and build.

The Nokia 6 sports a 16MP rear sensor with f/2.0 aperture and dual-LED dual-tone flash. On first look, the camera module and flash together look like a dual-camera, but the Nokia 6 is far from it. Image quality is poor and the phone is not dependable in low light since it takes rather long to focus. The camera app itself takes longer than average to boot.

Our PC Mark battery tests kept crashing on this device, but regular usage results suggest a work day's worth of battery life.

It pains us to say it, but the fact is that the Nokia 6 is a sub-par smartphone with no real redeeming feature about it. It has a decent design and somewhat dependable battery life, but its performance and camera quality make it impossible to recommend. The Nokia 6 is outperformed by almost all of its chief competitors.

ASUS Cerberus V2

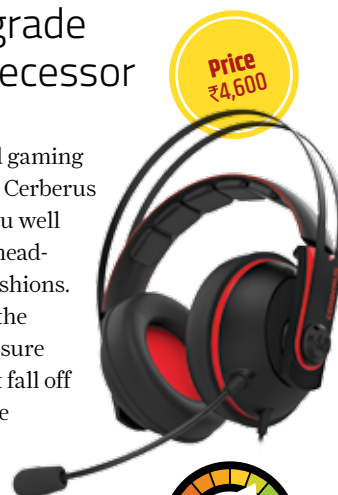

A worthy upgrade from its predecessor

For prolonged gaming sessions, the Cerberus V2 serves you well because of the padded headband design and ear cushions. The clamping force on the headset is enough to ensure that the headset doesn't fall off with sudden jerks while remaining comfortable enough. The steel frame on one of the headbands keeps the entire headset sturdy. The cushioning on the ear cups is enough to isolate background noise to an extent while being soft enough around your ears. The detachable boom mic is flexible and rigid enough to maintain whatever position you bend it.

Coming to the headset's performance, the audio works out well for gaming but not too much for listening to music. The lows offer a strong bass and reverb for gunshots and explosions, but when it comes to music, the bass feels overpowered. Although you might enjoy a couple of dance and EDM songs with this headset, you won't enjoy songs with acoustic instruments and vocals. When it comes to voice chat, you will be able to hear your teammates well but we had to crank up the volume a bit to achieve that. The microphone performs really well for voice chat through Discord, but we wouldn't recommend it for streaming or voice overs.

The Cerberus V2 is priced at ₹4,600 aiming for entry-level gamers. You don't get any fancy features like RGB lighting or removable ear cups. What you get is a comfortable headset with a modular microphone that will take care of your single and multiplayer gaming sessions.
