Xiaomi Mi A1 vs Moto G5S Plus

The Xiaomi Mi A1 and Moto G5S Plus are two phones that sport stock Android and dual-cameras as their unique selling points.

Prasid Banerjee | prasid@digit.in

INTRODUCTION

Is your phone “pure, secure and always up to date”? That’s actually Nokia’s promise, but also what every stock Android-based smartphone boasts. After spending years trying to promote custom interfaces, companies are finally realising that a big subset of the market actually makes buying decisions based on stock Android software. The most recent to

realise this, of course, is Xiaomi. And when you do make a stock Android phone, you become direct competitors with Motorola.

The Xiaomi Mi A1 (review) and Moto G5S Plus (review) are identical devices, as far as specifications are concerned. They run stock Android software, sport the same chipset, have similar sized batteries and displays with the same resolution. Barring the

Mi and Moto logos, there’s precious little to choose from. The two phones even cost the same.

How do you decide which phone to buy, then? Read this comparison, of course!

BUILD AND DESIGN

If you compare dimensions, there’s little separating these two devices. The phones are equally tall, wide
