

### Tarantino + Star Trek

For the Star Trek franchise, Quentin Tarantino could direct one more film before officially retiring as a filmmaker. <http://dgit.in/TaranTrek>

### Rise of the Porgs

The Porgs, a species that will appear for the first time in Star Wars: The Last Jedi, might already be a huge hit. <http://dgit.in/SWPorgs>

# Teardown: Samsung Galaxy Note8

We take a closer look into Samsung's flagship phone that sells with a stylus.

## So many cameras

The dual-camera module on the rear enables a few interesting features. Live Capture allows you to adjust the amount of blur around your subject, similar to a bokeh effect. Dual Capture allows you to take two shots, one would be the blurry one shot using Live Capture whereas a second one will be a wide-angle shot. The Note 8 is capable of Face Detection but the feature is easily fooled by photos, making it a huge risk.

## Lower capacity battery

The battery capacity on the Note 8 (3,300 mAh) is lower than on the Note 7 (3,500 mAh). Samsung's Mobile Chief Koh Dong-jin, cleared out that the capacity was reduced because the 10-nanometer processor was 30 percent more efficient. While guaranteeing the battery safety, he assured that the battery will retain 95 percent of the battery's capacity even after two years of usage.

## Making the S Pen useful

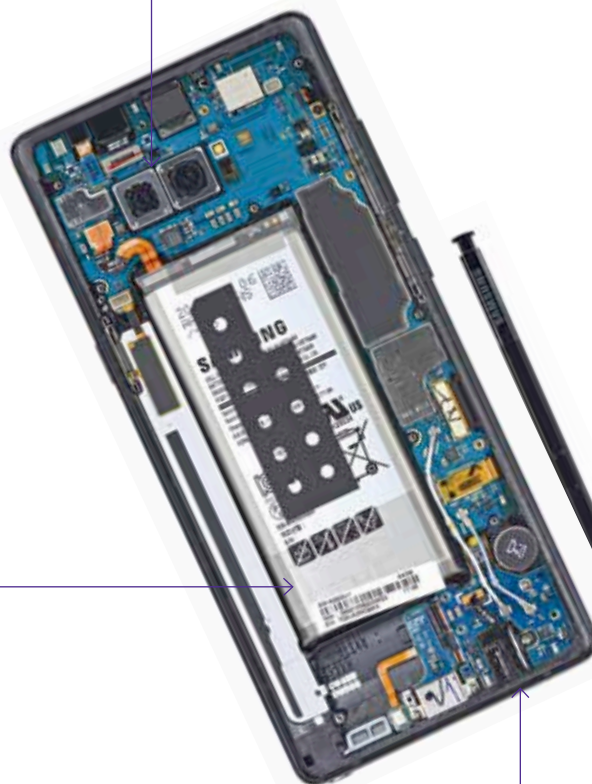

By hovering the stylus over text, you will be able to translate it to your default system language. Along with that, you can also convert currency by just hovering over the amount. Another fun feature is Live Messages that allows you to create and share animated doodles.

## Bigger is better

It includes an even larger "Infinity Display" which is the largest Samsung has ever used. It has a 6.3-inch Super AMOLED panel, a resolution of 1440x2960 pixels, 83.2 per cent screen-to-body ratio, support for HDR10, and everything is protected by Corning Gorilla Glass 5.

## The 3.5mm jack stays!

Something which is being dropped by premium smartphone manufacturers since Apple removed it, the 3.5mm jack is retained here. The Note 8 is IP68 certified which means it's dust resistant and water-resistant (up to a depth of 1.5 metres for 30 minutes), something Apple hasn't implemented, not even on "the future of the smartphone".
