

have anything to do with dancing, and actually means a large public gathering at which people perform an unusual or seemingly random act. And how can you do that? First, you need to know what your mob will do.

Apart from choreographed dancing, there are several options for your flash mob. For instance, a group song or musical performance could strike the right chord (pun intended), or you could do a group mime (imagine a hundred people playing air guitar in sync or walking imaginary dogs!). A classic and popular alternative is to freeze up at the same time. Checkout examples of your idea on YouTube for a better idea. Once the idea is fixed, you need the mob.

Use services like Meetup or Facebook Groups to find people interested in the kind of performance you're planning. Next, take permission from the relevant authorities depending on your performance location. For instance, in your school/college, you might need to check with the head of the institution, whereas at a mall you might have to contact the mall manager. Remember to send us a video of your mob, and we'll try and feature it on our site and/or Facebook page.

Take apart your gadgets

At some level, you're not

a true geek if you've never really felt like taking a gadget apart and seeing for yourself what's inside. On the other hand, if that's exactly your idea of fun, first give us a high-five! Once you've located what you want to disassemble, get yourself a toolkit.

We've never been much for going halfway, so we'd recommend the full iFixit toolkit (<http://dgit.in/iFixitBuy>). And to be honest, the right toolkit will go a long way to not causing any damage to your gadgets. You could even try your hand at repairing some of the stuff you've gathered using some of the handy guides here: <https://www.ifixit.com/Guide>. Disclaimer: Make sure you've taken proper precautions – which might involve disconnecting all power sources and batteries, and using an antistatic wrist band – to prevent any pain to you or your gadgets. We would advise you to start the 'taking apart' with old, discarded gadgets before moving on to your current in-use arsenal that needs increased dexterity.

09

Play smartphone pranks

In today's smartphone dependent world, it shouldn't really be difficult to pull off a range of pranks on your friends and the people around you in general. A word of advice before we proceed further – don't take a chance with boss, teacher, principal, etc., if you're not sure how they'd react!

There are tons of pranks apps that will almost do the job for you once you've installed them. For instance, try the Crack your Screen app (<http://dgit.in/CrckdScrn>) to simulate a cracked screen on your friend's phone. You could set it to crack on touch, shake or even a timer. And if you don't mind

something childish, you could try Motion Fart on Android (<http://dgit.in/MotionFrt>) and Fart for Free on iOS (<http://dgit.in/FrtiOS>).

Even if the apps can be really funny, you don't always need an app for a funny prank. There are innumerable ways you can harmlessly mess with your friend's phone. Switch two con-

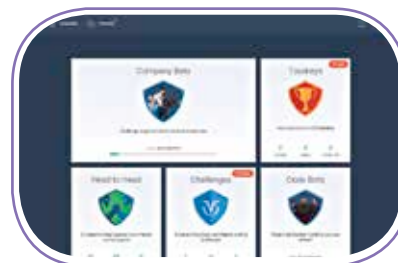

tacts, set an embarrassing ringtone, edit autocorrect for common phrases such as 'ok' to funny stuff like 'shizzle dizzle!', and much more.

10

Have a codefight!

There's way more to coding and programming

than keyboard bashing at the fastest speed possible, as is often depicted in movies and TV shows. In fact, some of us geeks really have a great time cod-
