

Grain silo = Art Museum

Architect Mat Cash transformed a facility meant to store 30,000 tons of produce into a celebration of art.

I

magine this scenario: you've had a tired day but you've made it through and are about to go to sleep.

Your eyes are closed, sleep is gradually seeping in when out of nowhere, someone in the next room starts playing the Imperial March on the piano. Problem is, you live alone!

Gathering up your courage, you grab whatever you can for self-defence and slowly tip-toe around the house, looking for a phantom pianist. There's nobody to be found anywhere. You're convinced that you're being haunted. Heck, you don't even have a piano!

It's very unlikely that this would happen to you, but this does happen to someone suffering from hearing loss who experiences a musical hallucination for the first time. Even if it's not the full-fledged Imperial March, in some cases it's just a few repeating tones, or a melody of some sorts. Either way, imagine the terror of actually living through that!

A rare occurrence, musical hallucinations can make you believe that someone's playing a piano in the next room when you live alone. Here's how it happens.

WHAT IS IT?

A musical hallucination, as the name suggests, is hearing music when none is being played within hearing range. A simple hearing disorder is not that

uncommon. Say, if you're the clubbing and concert-ing kind, you might have already experienced a slight (or heavy) buzzing tone after you've left the venue. A persistent version of this disorder is more commonly known as tinnitus. Though musical hallucinations (MH) are very different from tinnitus – they're more complex, rarer, and as a result, we know much less about them than we should.

WHAT DOES IT FEEL LIKE?

The big difference between tinnitus and musical hallucinations, though, is how real they can seem – especially the first few times it happens. It doesn't sound like a pop song playing on your headphones with a full array of instruments. MH occurrences are a

For first timers, the experience can be really scary
