

Antibody attacking HIV

Scientists have been able to develop an antibody that fights against up to 99% of the HIV strains.

Winners of IICDC, Rakshit Ramesh, Karthikeshwar Varma & Anoop Kulkarni, receiving the prize from Dr APJ Abdul Kalam

hardware prototype. Winners get the cash prize from TI as well as additional funding from DST to transform their idea into reality.

INTERNATIONAL SCIENCE AND ENGINEERING FAIR

The Intel ISEF aims to highlight projects from school and local level science fairs across the world on a global platform where they are judged by doctoral level scientists. The contest is the largest pre-college science competition in the world and sees participation from millions of students from around the world. From India, you need to participate in the IRIS national fair (<http://digit.in/IRISfair>) and be in the top 20 to qualify. Participants can win a cumulative amount of about \$4 million in prizes. In the 2017 edition the Biodegradation of Chlorpyrifos and Soil Remediation Using Native Soil Bacteria and Triton X-A Novel Approach by Prashaant Ranganathan were winning concepts.

INDIA DESIGN CHALLENGE

Autodesk and National Institute of Design (NID) together provide this platform to encourage design-led innovation among students called the India Design Challenge 2017. Participants will be leveraging the power of Fusion 360, a cloud-powered design software by Autodesk, to conceptualize and build out-of-the-box industry design solutions. The two design topics for the participants this year are: Personal Mobility Solution for Urban Youth – 2025 & Design of Green Vehicle in year 2025. Students of undergraduate and postgraduate courses of all design schools can participate in this challenge. While this one does not have past winners to speak of, the repute that NID carries in the world of design is interesting enough for students to participate.

AEROSPACE DESIGN CHALLENGE

Honeywell organises the Aerospace Design challenge in India annually to invite ideas in the aerospace domain

from college students all over the country. From its first edition in 2014 till this year, the competition has seen a large number of students (239 students from 19 design institutes across India in 2017) presenting ideas that take innovation in the aviation industry to a new level. This year, the students were charged with designing a user-friendly, enhanced situational awareness solution for Aerospace communication, navigation and surveillance.

ACCS-ARM DESIGN CHALLENGE 2017

Advanced Computing and Communications Society (ACCS) together with ARM and TVS Motors, organise the ACCS-ARM design challenge every year for final year engineering students all across India. Students design solutions for given problem statements, and finalists have to demonstrate actual working prototypes. Started in 2014 by the ARM University Program in India, the competition has been growing year on year in terms of participation, with the theme this year being Autonomous Vehicles. While registrations for this year are already closed, the same should be open till the end of August 2018 for next year. Participants will be provided with an Autonomous Vehicle Platform from TVS Motors as well as the ARM Cortex M4 platform kit. Winners will get prizes as well as a chance to intern with TVS Motors. Some notable projects to have come out of this competition are 'Priority-based Traffic Management System' in 2015 and Smart Helmet in 2016

WHY PARTICIPATE?

Linus Pauling, a great American chemist and peace activist, once said that "the best way to have a good idea is to have a lot of ideas." That seems to be the motto that students across India have followed with the numerous competitions across the country consistently receiving more entries than they expect, year on year. And it is with this persistence in innovation that India will reach newer heights – all thanks to its students. 

TEAMINDUS LAB2MOON

Earlier this year, TeamIndus organised Lab2Moon, a competition in which students were supposed to design and build an experiment focussed on sustaining life on the moon. Team Indus is one of the main contenders for the Google Lunar X Prize, and the winners of Lab2Moon.
