

Scotland bans corporal punishment

Keeping up with the times, Scotland has outlawed corporal punishment. However, the rest of UK are yet to follow suit. <https://goo.gl/4m6sXi>

The Earth very nearly froze over

The carbon we use as fuel today to generate heat very nearly caused the planet to freeze over millions of years ago <http://digit.in/frozenover>

much. Since those writeups aren't really standalone articles, they haven't been uploaded anywhere so there's no link that I could share with you where you'd find them all in one place 😞

Though I do remember some of the recent ones and I've listed them below for you to check out.

Books: Sapiens, Brief History of Everything, Guns Germs and Steel, Elon Musk by Ashlee Vance, You Are Not So Smart by David McRaney.

Music: Hand Cannot Erase, To The Bone

—Siddharth

You are doing a great job on Facebook. We can see all latest

launches and reviews get listed online. Also liking the facebook live sessions from Digit. Video quality and content is also upto the mark. Almost perfect. But this time I am disappointed as I (you) missed a major thing.

You didn't mention in your reviews and videos that the One Plus 5 second SIM slot does not support 4G. Even in that big comparison with Honor 8 Pro. This was an important thing and should have been highlighted in all reviews and videos but it was not. Please be careful and highlight such things to the user. Rest all things come everywhere. We expect Digit to talk on things that others have missed.

—Gaurav Khurana

Thanks for writing to us and freely expressing your views. We apologise for not covering the aspect clearly. The OP5 does support dual 4G. But, as you rightly pointed out, we should have also tested dual active 4G capabilities and reported about the same. However, you should be aware that most Dual 4G phones support 4G + 3G when both SIMs are active. While some only support 4G + 2G config.

We shall be updating our review and adding that bit to it with a special mention to you for helping us make the clarification.

Thanks again and do keep writing in to us in the future :)

—Soham

Letter of the Month

I have been a fan of your magazine from the time it was first launched in 2001. I haven't written to you all this while, so this letter is long overdue. I was in standard 11th when I first read Digit and it sure was the best thing that could happen at that time considering we were in 2001 with no smartphones, mobile internet or internet at all. Special mention to those demo games in the Digit CDs! What I love in this magazine is that it exactly follows what I am interested in:—

Gaming: There's no doubt in mind that Digit Team members are gaming enthusiasts. The introduction and upkeep of SKOAR! itself suggests that it cannot be managed without raw passion. My fondest school memories have Digit magazine associated with them – be it for gaming demos or the new skins for Winamp or latest versions of DirectX.

Dmystify: I love knowing about the cosmos and the dmystify editions are very entertaining and engrossing. While they not be appealing to all readers, I find them captivating.

FastTrack: As the name suggests these booklets put you on the FastTrack to learning things. Indeed, a great effort from the Team Digit.

I never miss reading the editorials because it is where perception comes into play. I would like to make a special mention of the RSS feed in the Oct 17 issue where the editor talks about rebooting humanity to 50,000 years ago. I strongly agree with Robert that all innovations before becoming a breakthrough technology have been contributed

upon by different people throughout the course of history.

Digit has been and will continue to contribute effectively to the technological awareness among the young and interested. As an avid reader I would like to congratulate team Digit on the excellent work they are doing. A suggestion: convince big gaming publishers such as EA, Square Enix etc to feature their demos on the Digit DVDs.

About me: Sometimes, (more like most times) I am jealous of the Digit guys because they probably are involved in doing something which passionately drives them. I have been very much tech oriented throughout my academic life. A national scholarship winner for Computer Science in class 11 & 12 two years in a row. I had a full score in Comp Science in my board exams. Though technology still drives me I continue to follow it through your magazine. It makes me relive the fondest of memories I had in school times. Sometimes I feel that alternative histories should exist and we could have a control on them. A delightful thought though it doesn't seem possibility in the near future till then whatever will be, will be, Que Sera Sera.

—Gautam

(A proud serving member of the Indian Armed Forces)

First of all Gautam, apologies for editing your letter. In its original form it would've easily taken up this entire section. Nevertheless we're all so glad that you sent us your long ode to Digit. Reminiscing the old days through the eyes of a long time reader is something we all can relate to. Many of us were readers as well when you started on your Digit journey. Thanks for your suggestions as well. Glad we could enrich your life in a small way and thank you for doing the same for us.

—Team Digit
