

SECURITY WATCH

W-Fi got KRACKed

Security analysts have discovered a serious flaw in WPA2 Wi-Fi protocol that could make all devices using the humble Wi-Fi vulnerable to hacking. WPA2 has been used on all certified Wi-Fi hardware since 2006. The WPA (which is now obsolete) and WPA2 standards were created by the Wi-Fi Alliance industry group that promotes interoperability and security for the wireless LAN industry. Users are advised to update their Wi-Fi devices as soon as companies start rolling out security patches. Using a VPN (Virtual Private Network) is also another way to encrypt your data and remain safe from the KRACK hack. 41 percent of Android devices are in danger of getting affected by some form of the attack. <http://dgit.in/KRACKed>

MOBILE WATCH

Pixel 2 & Pixel 2 XL

Yes, it is that time of the year. No, not the iPhone launch, guys! Google was back again this year with the Made by Google event, where they launched the newest entrants to their Pixel phone range - the Pixel 2 and its larger sibling the Pixel 2 XL. Among other specs, most notably the phone boasts of the 'best smartphone camera ever' with the DxOMark rating of 98 (for context, the latest iPhone is at 94). Lookout for our review of the new Made by Google flagships!

APP WATCH

Star Walk 2

Gyroscope enabled star-gazing apps are not new (what wonderful times we live in!) but Star Walk 2 does justice to the experience for true stargazers and beginners alike. Complete with a serene soundtrack playing in the background, Star Walk 2 amazes you right from the start with the amazing 3D polygonal visuals it uses to depict constellations, as well as the beautiful representation of the horizon as an infinite ocean all around you.

If you were starting to think that this app was all about fancy tricks,

then drop that notion right now. Tapping on almost any celestial body not only shows you more information about it, but also shows its trajectory in real time. Getting the pro-version unlocks deep space objects, planets, constellation view and more. Constellation view is one of the most unique things about this app, where tapping on a constellation's name takes you to the zoomed in view that shows the layout of the stars with respect to each other in space - a truly insightful experience to understand how constellations were identified.

Whether it's about information or sheer beauty, Star Walk 2 will leave you overwhelmed. Give it a shot to love star-gazing all over again.

Reverse Dictionary

While dictionaries come to your aid when you already have a difficult word with you, what can you do when you're looking for a word itself? Reverse dictionary fills that need, along with other useful features like 'Sounds like' and 'Spells like'. A must have for writers.

Be My Eyes

Using the simple technology behind a video call, this app aims to set up a network of volunteers who are available to help people with sight disabilities go about their day. And if you're not able to receive a call, fret not, as it goes to multiple volunteers at the same time.

Pluralsight

For professionals looking to gain skills on the go, Pluralsight offers 5000+ courses on anything from JavaScript to Windows Server to Photoshop and more. And if you go for the Plus membership, you can download upto 10 courses for offline consumption.
