

the best solutions and they never want to compromise with the quality of gaming gears."

Panigrahi explains how this is also a good time for Indian gamers to be a part of big competitions like TEGC. "For the gamer in India, being part of TEGC gives them a platform to test their skills, build camaraderie and be part of the new movement taking shape in the world of PC gaming. It gives them an experience of competition, fun and access to great technology. The continued success of TEGC is a testament to the organisation of the event and the huge turn-out bodes well for the gaming industry's future in India."

Of course, new trends are proving to be beneficial too. Platforms such as Twitch.tv and YouTube Gaming have turned gaming into a popular and profitable spectator sport. This format of video-gaming to live audiences has actually been one of the Internet's big success stories in the past few years. As Tsai puts it, "Live streaming is the new fashion in this era. With AVerMedia Capture Card, everyone can easily be an online celebrity."

TEGC HAS BEEN THE GAME CHANGER IN INDIA.

GAME CHANGER

Of course, there are a few obstacles left to tackle despite the huge successes India achieved. Gaming and eSports in the country are still in their infancy, even with a total number of Indian gamers of around 206 million. This is mainly because of the lack of extensive fast Internet connections, societal acceptance, and suitable infrastructure. Also, investments in the industry are high risk and not always high returns. This is what competitions like TEGC are looking to change and have succeeded to a great extent too. Panigrahi explains how this is happening. "Being a gamer in India has its challenges. Gaming is not fully accepted as a right hobby or a profession here and this is mainly because it has remained in the private room of the gamer. Events like TEGC gives them a chance to showcase that gaming can become a mainstream activity in their lives and given the right backing and opportunity, it can turn out to be a lucrative career as well. More e-sports events will surely help accelerate the change of the Indian gaming industry along with great PC gaming products like Predator series we see coming to the market."

He makes a point about the lucrative aspect because in its four seasons, TEGC has offered some of the biggest prize money to its winners. This year, a whopping amount of Rs10 lakh in total, with the winning team Team Buriza & Team TMG taking home Rs. 2 lakh each, Team Rog Titans & Shooting Monkeys winning second place with Rs. 1 lakh each, and team GIFF Sponsors & Team SRA and team GO Figure & Team Elements winning the third and fourth place respectively with Rs. 50,000 each. Finishing fifth, sixth, seventh and eighth place are teams Youth Buriza, Feroocious, Aggressive 5 and White Shadows for DOTA 2 & Sempex, V Ban, Makeway and God Particles for CS:GO, taking home Rs. 25,000 each.
