

BIG PLATFORM, NEW LAUNCHES

Big brands are also keen to tap into the nascent but fast-growing Indian gaming industry and are looking at launching new gaming gear for the Indian market. This year, TEGC came up with a unique initiative to give Indians a glimpse of the best of technology that its brand partners offer. It reached out to people across India through a special vehicle, named the #TE Gaming Rig. The gaming vehicle cruised its way into the hearts and minds of people, touring 50 locations in India, covering nearly the entire western and northern regions before returning to Mumbai. #TE Gaming Rig promoted and showcased radical gaming products -- from gaming gear, peripherals to other components -- belonging to renowned Taiwanese brands, reaching out to the masses and giving them a chance to experience all of this. Said Panigrahi, "Taiwan has always been the technology hub of Asia and the world with some of the most successful technology companies headquartered there. With all the technology knowhow pouring into developing some of the most advanced gaming PCs and accessories, Taiwan has proved again that it is a country on the cutting-edge of innovation and gaming is the right platform to showcase the newest innovations in personal technology. Efforts by TAITRA and events like TEGC only help to enhance Taiwan's image as the world's best technology and gaming destination."

Also, big brands are now looking at making the best of the situation in the Indian market by offering a good portfolio of innovative products for the Indian market. They are putting in place a robust marketing strategy to accelerate growth and using an extensive array of marketing touch points to deliver their brand experience. Tying up with big names like TEGC is helpful. It's a win-win situation for both because while gamers get to experience the best technology at TEGC, the brands get a superb platform to display their products. Kenneth from Thermaltake, agrees. "TEGC aims at promoting the e-sport industry in India. E-sport is a rising trend. As a brand, when we decided to associate with TEGC, we wanted to give gamers hands-on experience of professional gears or PC system related to e-sports. We also wanted to educate gamers about the advanced gaming products since TEGC is a platform where gamers can best show their talents and get recognition in international fields. It works for us as well as them."

Panigrahi also points out that events like TEGC are great to reach out to Indian gamers because otherwise, not many people can afford or are willing to invest in expensive gaming rigs, even when the interest in gaming has increased significantly. "Our products like Nitro 5 gaming laptop gives the right technology to price value for budding gamers to get into PC gaming and for professional or hard core gamers, we have the high-end gaming rigs like the Predator series. Acer offers an extensive product portfolio for gamers with laptops,

desktops, monitors, projector and accessories targeting gamers."

For gamers, TEGC is a big payback because this is where they catch a glimpse of technology that is extremely advanced and relatively affordable. Tsalis upbeat about the future of Indian gaming. He said, "The gaming market holds several future trends for India. With an increasing number of mobile internet users, mobile gaming streaming will be the new feature for gamers. Being the global game capture leading brand, AVerMedia has launched the first standalone game capture card for mobile game recording. This may bring a somewhat fresh perspective in India's gaming industry and arouse the spirit of gameplay streaming."

GAMING DESTINATION OF CHOICE

Taiwanese brands are putting their best foot forward to offer some superlative technology to gamers worldwide, India included. Over the past four years, TEGC has allowed Indian gamers to witness and experience first-hand this very advanced technology. As Panigrahi puts it, "Taiwan has greatly contributed to global technology advancements and gaming is the next biggest tech revolution we are witnessing from Taiwanese brands. With well established brands like Acer and others offering outstanding products to Indian gamers, Taiwan is proving once again to be the gaming destination of choice."

For now, it's one of the best times to be a gamer in India. India has the largest youth population in the world, with two thirds of the country falling under the age of thirty-five. It is this demographic, the early embracers of technology, that has been the major driving force behind the growth witnessed by the gaming industry. With major events like TEGC literally rocking the gaming circuit, Indian gamers have a lot to look forward to. Gaming in India is en-vogue and how!
