

Gold from Neutron stars

A recent paper suggests heavy metals, including lead, uranium and gold, were produced from colliding Neutron stars. <http://dgit.in/NeutrAu>

thankful that AMD brought out two great products with their CPU and GPU lineups, which is why I'm willing to look the other way with their low-stock launches. However, another mishap, and they'll join Intel and NVIDIA in my books.

To the companies, investors are certainly important but so are your customers. The former only came to

be because the latter put their faith in your products. And now with competition renewed thanks to AMD, these companies can't afford to rub customers the wrong way since brand loyalties are waning with each passing product generation. It would be best if the companies were as transparent with the customers as they are with their deep-pocketed investors. **d**

BUYING ADVICE

WHICH PHONE TO PICK?

Q I'm thinking of buying a phone this week after doing some surfing and all I have came up with are three choices:

- Moto g5 Plus
- Mi Max 2
- Honor 9i

Can you guys tell which one has what advantage over the other?? Moreover if there is any other phone you think will be a better choice please do tell.

—Vasu Gupta

A The Mi Max 2 is the fastest phone in this lot, although it's also huge and difficult to carry around. On the other hand, both the Moto G5 Plus and Honor 9i have better cameras than the Mi Max 2, with the Moto G5 Plus being the faster phone between itself and the Honor 9i. I'd suggest going for the Motorola device, since you're promised at least two Android updates, which makes your phone last longer. It will be the best value for money in this range. Stock Android combined with the Snapdragon 625 gives you reasonably fast performance, and it has the best budget camera at the moment. Choose the 64GB version if you download lots of apps.

Lastly, in terms of battery life, the phones are ranked this way in decreasing order: Xiaomi Mi Max 2, Moto G5 Plus, Honor 9i. The Mi Max 2 will last you over a day, while the other two will last you a day. The Moto G5 Plus can

give a few hours more battery life than the Honor 9i.

NON-RGB MECHANICAL KEYBOARD FOR GAMING

Q Hello Digit, my beloved half-a-decade old membrane keyboard has finally broken down. I'm using a spare one for now. Now, I'm looking for a mechanical keyboard and I'm not really keen on getting RGB backlighting or any gimmick. I'll be gaming on it most of the time and there will be some casual web browsing too. Please don't suggest any of those duplicate mechanical switches. I want a long lasting one. Oh, and my budget is under 10k.

—Ravi Sinha

A Hi Ravi, it's unfortunate that your keyboard broke down. We understand how difficult it is to part from your hardware and components that have served you for so long. Nonetheless, you have a healthy budget and because you aren't interested in RGB lighting, we would suggest you to go with the GALAX HOF Black keyboard. They ship with genuine Cherry MX mechanical switches and the build quality is impressive on this keyboard. The backlighting is white, if that is a concern to you. The keyboard sells at ₹7,000. **d**
