Microsoft puts an end to Groove

By the end of the year you will no longer be able to stream, purchase or download music via Microsoft's Groove music app. <http://dgit.in/groove2spotify>

Zebronics Max Plus

A new winner in budget mechanical keyboard

Price
₹2,999

T

he Max Plus is a full-sized 104-key mechanical keyboard packing all

the required features necessary for gaming and typing.

Backlighting is bright, and although it's not RGB, all the rows have different coloured LEDs giving an illusion of an RGB keyboard. Along with

that, you get support for multimedia control and Windows lock through modifier keys. Full n-key rollover is present on the keyboard and there wasn't any visible input lag or erroneous key presses.

On the inside, the Max Plus packs Outemu Blue mechanical switches which, although similar to Cherry MX Blue, boast of only 10 million clicks. They have a similar actuation force of something between 50-60g and travel distance of 4mm. Gaming on the Max Plus wasn't bad and typing on the keyboard was also pleasant. Apart from the switches, the chassis build quality is average. However, the keycaps are double-shot injected which indicates a longer lifespan of the characters on them.

There's nothing attractive in the design of the Max Plus nor does it offer the best build quality. It's USP is the price of ₹2,999. While the TVS Gold is available for a lower price with genuine Cherry MX switches, it doesn't offer backlighting. The price differs only by a few hundred rupees, so it's best to go for the one with more features. If you've always fancied a mechanical keyboard, you wouldn't need to think twice about the Max Plus.

—Abhijit Dey

Intex LED B4301 UHD SMT

Not good enough

Price
₹52,990

O

ut of the box, Intex's 43-inch 4K UHD Smart television

sports a utilitarian design. Barring the semi-circular, metallic stand, the TV doesn't make any efforts to look and feel like a high-end television. It's bezels are reasonably thin and it's really light as well.

While the TV is easy to set up, there's a noticeable wobble that seems rather precarious. Even if the port situation is well handled, picture quality on the Intex TV isn't the best. The picture quality is an overall letdown and even if you do get to play 4K content on this TV, the change in quality is barely visible. That's mostly because the panel isn't very good in the first place. Another problem is that the Intex TV's USB ports don't seem support NTFS hard drives.

For software, the company has created a forked version of Android 5.1. The UI is reasonably fast and smooth. Instead of a Play Store, you get Intex's App Store, which seems to have a lot of problems with supporting even common apps like Netflix and Prime Video. Even the controls are poorly designed.

With lacklustre audio summing up the cheap experience, ₹52,990 is far too expensive for this television, and you'd be better off buying a FHD TV, which will also save you money. If you're bent on buying a 4K TV, TCL's 50inch 4K TV looks better and delivers much better picture quality, at a slightly lower price point.
