Zebtronics Premier ZEB-916B

Decent cooling, good build, great price

The case has two 120mm fans on the front panel and one 120mm fan on the back panel installed which are incredibly bright with white LEDs. The top panel contains all the I/O ports including one SD/microSD card slot – a nice addition to have. It would also have been great if there was a button to switch on and off the LED lights on the fans. There are two 120mm fan mounts on the top panel but install both and the top panel won't attach. The fans have to be installed below the top panel and do keep in mind that you will have to install them before you install the motherboard.

The case supports a 320mm GPU if you remove the SSD cage. There's no

room to install 240mm AIO coolers anywhere in the cabinet which could be an issue for future updates for liquid cooling. With our test rig, the i7-4960X

touched 70°C in our Prime95 stress test. The GPU reached a maximum temperature of 65°C in our Furmark benchmarking 1080p preset. Air cooling isn't that great in its stock, but if you have intensive workloads you could consider adding more fans. In real world tests (CS: GO) the CPU and GPU lingered around 55-60 °C. The Zebtronics Premier is a decent cabinet for its price but if you can spend a little more, consider the Antec GX900 as well.

—Abhijit Dey

SPECIFICATIONS

MOTHERBOARD FORM FACTOR: ATX, Micro-ATX and Mini-ITX | FRONT I/O: 1 x USB 3.0, Mic in and Audio Out, 2 x USB 2.0, SD/microSD card reader | DRIVE OPTIONS: 3 x 3.5-inch HDD, 2 x 2.5-inch SSD, 2 x 5.25-inch ODD | FAN SUPPORT: 2 x 120mm (front), 2 x 120mm (top), 1 x 120mm (rear), 1 x 90mm (bottom)

Zebtronics Eternity

Affordable, but muddled

The Zebtronics Eternity sports a premium finish, with a cushioned headband and earcups. It uses a lot of aluminium in the build, which makes it fairly sturdy. The headphones are available in gold, rose gold and silver, and our gold finish unit looks quite nice. However, the side rails should have been a bit longer to make the headphones more elastic.

You get play-pause, next/previous (doubling up as volume controls) and power buttons. Button feedback is shallow, and the buttons are not textured, which means you've to memorise the control placements. You also get a fairly decent mic for handsfree calling.

In terms of audio, the Zebtronics Eternity delivers loads of bass, although clarity is low. The tones are not clear, and lows are muddled on overall terms. The high level of lows create a booming effect, and this adversely affects instru-

mental and non-bass-heavy tracks. The mids are decent, but are slightly overpowered by the lows. Highs have decent flourish, and do not sound shrill. But, the overall audio sounds a bit hollow, and you tend to miss the cohesive sound signature of more expensive headphones.

However, at its price, this is almost as good as you get for on-ear wireless headphones. It has a good set of features, and even supports wired audio. Unfortunately, there are no aux cables included in box. Battery life is about six hours of play time, which is useable, if not decent.

—Souvik Das
