

Zuckerberg visits Puerto Rico in VR

In his latest VR live stream, Mark Zuckerberg explored Puerto Rico to show how machine learning is being used as part of its relief efforts. <http://digit.in/ZuckVRPR>

Kinesix smart jacket

The ThermoSmart has built-in sensors to adjust the temperature in the interior of the garment. <http://digit.in/Kinesix>

Alienware 15 R3 Gaming Laptop

Bow down before the aliens

Price
₹2,61,990

The review unit of the Alienware 15 R3 had different specs as compared to a retail unit, which we've accounted for.

Its design certainly stands out and speaks of quality from the get go. A key point with the Alienware 15 R3 is that you have two power adapter options, 180 W and 240 W. There is a performance difference between the two that should factor in your choice.

Both the touchpad and the keyboard have been designed keeping gaming specific features in mind, like a sweat resistant texture and concave keycaps. The Alienware 15 R3 has a good complement of ports along with vents on each side of the laptop.

The 4K panel on the unit that we received is pretty average. Moving to the webcam, the laptop has Tobii Eye tracking and Windows Hello support. For storage, the read speeds are decent but write speeds are low.

The Alienware 15 R3 packs in an NVIDIA GTX 1070 along with an Intel Core i7 6700HQ. It is pretty close to the retail unit in terms of performance. While price can't be commented upon without a retail unit, going by data from Dell's website, it's more expensive than the likes of the MSI GE73VR and HP Omen W 250TX. But thanks to build quality, you get your money's worth in that aspect. For a detailed review, checkout <http://digit.in/DellAW15R3>.

HyperX Alloy Elite

Minor but useful feature upgrades for a premium

Price
₹9,999

The HyperX Alloy Elite builds over what the Alloy FPS lacked, with a price bump of a couple of thousand rupees. You have dedicated buttons to cycle through the brightness levels, backlighting effects, gaming mode and multimedia playback control, along with a fancy volume dial. This time a USB passthrough has been inserted on the top which results into a thick non-detachable, braided cable. You'll also get a removable textured palm rest. The package includes extra keycaps for WASD (textured) and 1234 keys, and also a plastic keycap puller.

There's still no software support nor you can record macros on the keyboard. You do get genuine Cherry MX switches with the same font design and keycap quality. The GALAX HOF keyboard has more or less has the same features. While both the keyboards are quite neck and neck, the HOF is ahead with build quality and pricing, despite fewer features. Do note that both have single colour backlighting, with white on the HOF and red on the Alloy Elite. If you're determined to go for the Alloy series, it's better to invest in the Elite rather than the FPS, if portability isn't a criterion.
