

World's largest supporter of electric cars

China is forcing automakers around the world to make the switch to electric cars in fear of being left behind by the giant. <http://dgit.in/chinaelecarr>

Nvidia platform for autonomous cars

Nvidia has announced a new system codenamed Pegasus which can power Level 5, fully driverless cars. <http://dgit.in/nvidiapegasus>

LG OLED65C7T

Top of the line

Price
₹4,59,990

In the TV space, LG has always enjoyed excellent brand recall and

trust. Why? Because the company makes good TVs. And leading LG's entire range is the Signature OLED series, which have always set the benchmark for what other televisions must be like. LG's OLED TVs easily made it to our favourites lists over the past few years, usually marked by excellent contrast ratio. The OLED C7 is part of that exquisite and high-end range, and though it faces tough competition from Sony this year, this is one beautiful television.

The image quality is absolutely gorgeous on this television. Colours are well defined and punchy and things look even better with HDR content. Incidentally, the LG C7 is one of the few televisions in India with support for both Dolby Vision and HDR10.

LG has also improved audio capabilities on the LG C7. It's loud enough for a medium sized room, but won't do well with music. It's also not the best at separating dialogues from background scores at times.

The LG OLED C7 is certainly amongst the best televisions to buy today. It brings excellent picture quality and supports the newest HDR technologies. It is meant for the premium, high-end TV buyer.

There aren't many competitors in the OLED market yet, but if we had to choose, the Sony Bravia A1 would be the better choice, thanks to better audio output from that TV. The LG C7 is excellent and comes in a close second, ahead of Samsung's QLED range.

GALAX HOF Keyboard

Impressive build quality, incredible pricing

Price
₹7,000

The white LEDs on the HOF keyboard are

bright but not as bright as those on the Cooler Master MasterKeys Pro S. There's no software support but the lighting effects can be controlled from the keyboard. The backlighting can be toggled through nine universal lighting effects while it further supports seven per-key lighting effects.

The keyboard also comes with audio and USB passthroughs, which is rare in keyboards at this price bracket. The magnetic palm rest on the HOF keyboard is the best implementation we've ever encountered in our test labs, making it super easy to attach and detach, while also increasing its durability.

Packed with genuine Cherry MX Brown switches, along with enough density on the keycap stems, the key press feels premium. A special lighting mode allows you to select the keys you want to be illuminated, which is a handy little feature. The two USB connectors are too thick to be inserted into the same row of USB ports on your motherboard. Support for on-the-fly macro recording is absent. At this price, we definitely recommend the HOF keyboard because of its superior build quality and essential features. There's an RGB variant listed on their website but they aren't selling in India yet. However, if RGB is mandatory and you wouldn't mind typing on Kailh Brown switches, you should go for the ASUS Cerberus Mech RGB.
