

Mozilla backs WebXR standard

VR and AR are going to be ubiquitous and Mozilla is proposing WebXR as the standard for virtual and mixed reality in browsers. <http://digit.in/MozWebXR>

Breaking Bad house fences fans out

Walter White's home in Breaking Bad has been surrounded by a six-foot wrought iron fence to keep invasive fans out. <http://digit.in/BrkngFnce>

Teardown: Apple iPhone 8 Plus

It's about time that wireless charging made its way to Apple smartphones.

Abhijit Dey | abhijit@digit.in

Reduced battery capacity

The battery capacity has been reduced to 2,691 mAh on the iPhone 8 Plus compared to the 2,900 mAh battery on the iPhone 7 Plus. This apparently allows more room for the Qi wireless charging system, although it could have included a higher capacity battery by increasing the thickness of the device.

Durable glass back panel, not!

During the keynote showcasing the iPhone 8 and 8 Plus, one of the highlights was the glass back panel. They claimed the back panel to be really strong but several teardowns have proved otherwise. In case the glass cracks, the back panel will be subject to a glass replacement which will be more expensive than a screen repair.

Puffing up batteries

Few reports have been coming in where the new iPhones (8 and 8 Plus) are splitting apart because of the battery swelling up. Apple hasn't been able to determine yet why this is happening (at the time of writing this teardown), only a small number of such incidents have been reported.
