

YouTube bans gun mod videos

YouTube has starting banning videos which show viewers ways to modify guns following the attack in Vegas. <http://digit.in/gunmodban>

Skype and other apps blocked in Qatar

Skype has been blocked by the ISPs in the UAE and Qatar. VoIP services like WhatsApp, Viber, Duo etc are also inaccessible. <http://digit.in/qatarnovoip>

Why is everything arse-ways in America?

From the way they write their dates to their weird measuring units, everything is cockneyed in Muricaland.

G

lobalized Standards are a wonderful thing. You could go anywhere in the world and have no

issue with most measurements. A litre of milk is the same amount of fluid be it in Madagascar or Alaska – but a kilo of gold is not the same when compared between somewhere in Africa and Antarctica. (If you were wondering why, this is due to centrifugal forces exhibited on Earth and therefore everything weighs 0.5% lesser at the poles compared to the Equator. Read more here <http://digit.in/poleweight>) All this is possible due to magic of Le Système International d'Unités or as we more commonly know it, SI Units. And when we said you could go anywhere in the world, technically, we need to have fine print saying "But not America". Why does Earth's third largest country by size

AND population use the frankly archaic Imperial system for measurements? And that's not the only way in which the USA is so different. We're here to break down USA's most stark differences and how they might have come to be.

MEASUREMENT

Let's start with the biggest elephant in the room. The Imperial System. We genuinely can't think of a reason why someone, ANYONE, would use it. It's definitely not because of ease of use - 12 inches to a foot, 3 feet to a yard and 1760 yards is to a mile downright crappy compared to 10 millimetres to a centimetre, 100 centimetres to a meter and 1000 meters to a kilometre. If we dig a little
