PTron VIKI Bluetooth Sunglasses

E Every once in a while, a product rolls into the labs that everybody wants to try their hands on – regardless of its performance. The PTron VIKI bluetooth sunglasses fits right into that category. It is a one of kind pair of shades that comes with Bluetooth earphones and a mic, or perhaps the other way round. Either ways, you get sunglasses that can play music for you and allows you to receive calls as well. Yeah, pretty cool.

When it comes to build quality, the VIKI does not fare too well. With the sunglasses having a plastic frame, the headphones themselves come with a fabric coating that make them prone to getting dirty quite easily, and that much harder to clean. The buttons themselves are made of rubber. One of the good things about the build is the way the earpieces can be adjusted. You can rotate them up to 270 degrees and a slider accommodates for different head-sizes, making it quite easy to adjust.

The performance does leave quite a bit to be desired. While audio output is pretty loud, there's a significant lack of clarity. But then again, by design the earpieces neither cover

your ear properly, nor seal it, so it's no good to expect much from the audio. The controls are quite responsive and work with almost no delay. Even double-tapping the play button to redial works perfectly.

Overall, the VIKI is something unique – even if it leaves much to be desired in most aspects. The only case where we can think of it being used, thanks to the dated sunglasses, is if you're a biker. But then again, it isn't advisable to use headphones while you're riding. Perhaps if only to relive the spy movies that we saw while growing up?..

SPECIFICATIONS:

PC CONNECTIVITY: USB 2.0 | ESTIMATED BATTERY LIFE: 6 hours | BATTERY TYPE/CAPACITY: 3.7V/150 mAh | MAXIMUM INPUT POWER RATING: 5VDC | EARPHONE OUTPUT POWER: 5 mw | VOICE OUTPUT FREQUENCY: 20HZ-20KHZ | THD: 0.05% | FULL RECHARGE TIME: 2 hours | SIGNAL-TO-NOISE RATIO: 85db | WEIGHT: 52g | DIMENSIONS: 172*160*40mm | EXTENDED LENGTH OF EARPHONE: 14mm | PRICE: ₹999

Astrum Smart Lock

A strum's smart Bluetooth based lock is capable of turning any Android or iOS device into a smart key. The Astrum AL150 – Smart Security Bluetooth Lock enables you to secure your home or office. It supports one touch pairing and comes with 128-bit enterprise-level encryption to make it more difficult for hackers to compromise it.

The lock does away with the need to carry keys, or at least, that's one less key you have to worry about accidentally losing.

The lock itself is sturdy, and in our opinion, good for use anywhere you would traditionally use a lock, indoors or outdoors.

We found it easy to pair the lock up with a phone and the unlock process was also easy via the app.

However, we did come across an issue when we paired a second phone to the lock. Initially, the lock refused to unlock from any phone other than the first one. We don't know if we're missing something or there's an extra step that we need to take, but there was no mention of the process anywhere. Eventually, it did unlock with the second phone as well. But it got confused when both the phones were in the vicinity of the lock.

The smart lock comes with two CR2032 batteries, that's 2x 225mAh batteries, which promises a lifespan of one year.

The smart Bluetooth lock is priced at ₹6,690 and will be available from leading retail channels. The app is available for download on the App Store and Google Play Store.
