

Saregama Carvaan Mini

After the popular Carvaan earlier this year, Saregama is back again with the Carvaan Mini, a smaller, portable version of its music box targeted towards the youth. The Mini is nearly one-eighth the size and one-fifth the weight of its bigger counterpart and comes with just 251 retro songs out of the box. Interestingly, it still retains all the connectivity features of the Carvaan. Hence, apart from the default Saregama mode, you can also use via bluetooth and for USB playback as well.

When it comes to the build, the Carvaan Mini has a rubber-coated plastic frame with a plastic grille. The rubber coating adds a sense of grip that makes it easier to carry around. Coupled with the rubber feet, the Carvaan Mini

isn't one to slip or slide by mistake. The buttons are pretty big and offer adequate resistance. We would have preferred slightly softer buttons though.

While there are no dials and mode buttons like the Carvaan, the Mini offers a workaround by allowing you to skip 10 songs by holding the next or previous buttons for 3-4 seconds. This works in the USB mode as well, although a similar feature does not exist for the Bluetooth mode. Audio quality is quite good for the Saregama mode, and does not disappoint in the other connectivity modes either. And if you combine all of that with the library of 251 classic songs that are bundled, the absence of an FM radio also doesn't sting much at the 2k price point. Just in case you're worried about after sales support, the device comes with a 6-month warranty. So rest assured, go for this if you're a fan of retro songs but have never managed to find time to create a playlist of your favourite oldies!

SPECIFICATIONS:

BLUETOOTH 4.1 | **USB 2.0** | **AUX IN PORT** | **DIMENSIONS:** (W) 110mm x (H) 80 mm x (D) 40 mm | **WEIGHT :** 210 g | **6-MONTH WARRANTY** | **PRICE:** ₹2,290

Signature Acoustics Robin

Signature Acoustic's Robin is a Bluetooth transmitter and receiver; an all-in-one function adapter.

As a transmitter it's capable of transferring music from your mobile, TV, PC, etc., to any Bluetooth device wirelessly. The Robin can also be used as a Bluetooth receiver, and can be connected to Bluetooth speakers or headphones (via 3.5mm jack) to receive audio signals from them wirelessly.

This functionality comes to you with a lot of portability as well. The device takes up little to no space and weighs only 18 grams. You can pair two devices to it simultaneously as well, so you can have two pairs of headphones, or one headphone and a stereo.

The Robin uses Bluetooth 4.1 and comes with the CSR BC8670 chipset. It runs between the 2.402 GHz - 2.480 GHz frequency. It houses a 250 mAh Lithium-ion battery with a working time of 12 hours in Receiver mode (RX) and 13 hours in Transmitter mode (TX). It has a charge time of two hours. It's a pretty handy all-in-one Bluetooth solution to have on you.

Everything you need to use the Robin comes with it in the package. You have the Robin itself, a 3.5mm connector, a micro-USB to USB charging cable and an RCA to 3.5mm adapter.

The Robin is fairly easy to use, but it could be a tad confusing at first, considering it's not like most other Bluetooth adapters out there since it can both receive and transmit audio. But once you've figured it out, which hardly takes any time, five minutes tops if you read the manual, it's easy to use.
