

**Inoperative FM radios?**

Your phone probably has an FM radio that you cannot use. Here's why that's so.
<http://digit.in/2AEdRa3>

**China goes all out on IPv6**

2025, that's when China plans to hugely increase its IPv6 adoption and put the old IPv4 to rest. <http://digit.in/2js9JPv>

>> Feedback for the November 2017 issue of Digit

Send your feedback at editor@digit.in

 I am an old reader of Digit since college. I used to read every issue and it is the best magazine I have ever read, which covers all the latest and upcoming tech news throughout the globe. Yesterday I was looking for Nokia's event for their new smartphone unveiling, and suddenly you came live on your FB page, thank you for that.

Are there any career opportunities with you, I would love to be a part of your team.

—Dev Chauhan

d Dear Dev,
 Thank you for your positive feedback, we really appreciate it. We will let you know if there are any openings. Send your CV to careers@digit.in so it's in our database.

—Robert

 I want to thank you from the bottom of my heart for showing me a way of life. I have a career goal, which not too many 15 year olds have, all thanks to one software in your Alpha DVD. You guys provided the demo version of FL Studio 12.2, and I found my calling. MUSIC! I want to be a music producer like Martin Garrix, etc. and if I get famous, it's you who I will thank. You have my word.

Now for my queries.

1. I do a lot of music producing, but

the project sizes are getting way too large in FL Studio with lots of automations and samples, etc. My CPU just can't handle the load. Here are my current specs: Intel i3 3220 processor @3.30 GHz, 4 GB DDR3 RAM, 500 GB internal HDD

2. I know most Android phones are capable of RAM management, but my phone doesn't seem to be able to. I own a Lenovo A6000 Plus with a custom ROM of Resurrection Remix Nougat 7.1.1 installed on it. Once I have more than four apps open, it can take 2 seconds after a down swipe for the notification bar to show up. The phone gets really hot as well when it's charging. There's a specific spot that heats up in the upper left corner just beside the SIM card slot.

3. Do you hire 20 to 25 year olds as testers? Just in case music production doesn't work out for me?

4. Can 15 year olds like me write for Digit? I can write either of the three following topics:

i. A column about the struggles of gamers like me who use a low-config PC to play high-config games.

ii. Anything about Apple!

iii. Anything to do with troubleshooting for Apple users.

Finally, please provide all the links that you mention in the magazine in a text file on the DVD.

—Kshipra Jadav

d We will hold you to that promise Kshipra. For your PC: According to FL Studio's own benchmark process, anything better than an Intel Core i7 7700 or an AMD Ryzen 5 1500X should be capable of handling the largest projects in FL Studio. If you are going for the Intel System, then the ASUS Prime H270-Pro is a good board to start with. And for AMD, there's always the Aorus X370 Gaming 3 or 5. As for the RAM, opt for 16 GB of DDR4 memory clocked at 2666 MHz or above. Depends on your budget obviously.

For your phone I'd recommend going back to the stock ROM and then ensuring the heating is not a hardware issue. You'll anyway need a stock ROM if you're claiming warranty.

Yes we hire all adults of any age, providing they display writing skills and a passion for technology. If we need anything written on those topics you mentioned, you'll be the first one we contact. Thanks for writing in.

—Mithun

 I am a reader from Gujarat who works as an IT executive in a big company. I want to request the following topics for Fast Tracks: ERP, Microsoft Products, Virtualization, Cloud computing, Office365, Server technologies. Thanks

—Himanshu Patel

d Hey Himanshu, we will certainly try and see what we can do about those topics. I can't promise we will cover all of them but the team can certainly attempt a few. Thanks for writing in.

—Siddharth

 Thanks for a wonderful magazine, but I have a complaint! I'd written to Agent 001 AND SOS last month, and got no reply.

The redesign is great, but the contents page only has page numbers of the main articles. It should contain page no of each and every article for ease of use. Second is where are the tips and tricks? When readers ask for a Fast Track on a topic you say it's already been done, but you don't tell us when it was done. There are over 150 issues of your magazine, how can we
