Net Neutrality debate heats up

The fight for net neutrality hastens with more tech giants stepping in.
<http://digit.in/2AdLQp2>

search through all that? I would like Fast Tracks to ethical hacking and storage. The dmystify is the best of the lot.

I don't like your posters as I don't play games. Instead give us posters of geeky stuff like Dwave computers or something. I want articles on quantum computers, Intel Optane, GPGPU, Meta universe and types of RAM. Please also add a page for the latest tech business news: acquisitions, mergers, etc.

You could also teach basics of coding, and cover predictions, and do more mobile game reviews. The AutoML article was scary. I like that you have one origins and one teardown in every issue. Please keep that going.

—Adityan Singla

d I will look into the email system and see why we've been missing emails. Usually we just get delayed responding because of the sheer amount of emails we receive, but we try and respond to everyone eventually. We will provide details of the month if we respond to someone saying the topic is already covered. We will also try and cover your suggested topics as well. Ethical hacking was last covered in June 2010. We will look into your other suggestions. Thank you for writing to us.

—Robert

 I've been a reader for ages. Love your magazine, the cover page and the contents inside. However, I do have some suggestions.

1. I know others may not like this, but do you really need a DVD? Why can't you just upload the contents and allow us to download? Why not include the cheapest available USB drive?

2. I love your packing, but I see a lot of plastic and cardboard being wasted. Any alternatives available?

3. Can you include some "how to's" on Assembling a PC for a hardcore gamer / working with a Raspberry Pi / Advanced powershell commands?

4. Articles for those seeking a career in Computer Science.

5. An article explaining Robotic Process Automation.

—Mathew Jacob

d Hey Matthew, the DVD is very important to a lot of people who still don't have unlimited broadband that some of us take for granted. This magazine goes to the most remote parts of India, and some of them barely get mobile network there. Downloading 8GB for them would be impossible. Why not donate your DVDs to someone interested in them? there's always someone who might want them for free. The packaging is all recycled, don't worry about wastage. We will look into your suggestions and see what we can do.

—Siddharth

 It's been only a few months since I started reading Digit, and I have been addicted to it ever since. Sometimes, I read the whole book again just because I have a lot of free time (I'm a 7th grader). You changed the layout of comparing two tech products this time (Radeon RX Vega 64 and Nvidia GTX 1080). The FastTrack was an awesome sequel to the last time's FastTrack. The poster of PUGB was awesome, just like SKOAR as usual. The dmystify was surprisingly very interesting to me and I would like to see more topics related to science in dmystify.

There is one thing that annoys me a lot, I got this month's issue on 14th Nov', which is almost halfway through the month (which is ok as I got it on Children's day) and was waiting for it eagerly since the month started. And also, on the cover of the book was written URGENT in capital letters. Oh god, it pissed me off. But again, the magazine was amazing as it is all the time and I found the review of Mi Mix 2 very nice and genuine.

—Mrinal Harshwal

d My sincere apologies to all our readers for the delay that you might have been experiencing in the past few months. We promise to do a better job. The delays were caused by the editorial staff, and not the couriers or anyone else, and we apologise profusely once again.

We're glad you liked the dmystify, it's about science every month. Keep writing to us, we really appreciate your feedback.

—Robert

Letter of the Month

Please don't make Digit magazine into a science magazine. It used to be fully about PCs, let it be that way. Some sections (tips and tricks, Q&A) have been stopped, please do start them again.

Please do add articles on:

- * HDD Repair or where it can be done (Because many stores/people claim to do it but in reality are of no use)
- * Win 7/10 OS problems/tips-tricks Internet broadband comparisons
- * Digital payments apps comparisons
- * Password manager comparisons
- * Going totally digital (money/c-d cards/id proofs/shopping): its safety and preventive measures
- * CCTV cameras at home: secure your home
- * Internet security tools
- * Computer hardware articles
- * GPS tracking of your car like ola/uber
- * Blu Ray player reviews

And for mag, a "suggested top 5 free softwares" list, from various categories (editing, music, network tools etc). Hope you like some of the suggestions and implement them in future issues.

—Neil D

Hi Neil, thanks for writing in. We will never be a "science mag" but we will never ignore science either. Our Tech section is bigger than all the other three combined! We will look at your suggestions, and try to cover them. Keep an eye out for them in upcoming issues.

—Robert
