

- Send an email later by using the Send Later button.
- Know whether an email you've sent has been seen or not by using the Request Read Receipts button on the bottom right of the email composition window. This also adds text to your email that specifies that Read Receipts are being sent for the email.
- Resurface an email from you if there are no replies by using the 'Boomerang This' checkbox and setting a condition while composing an email.

SEND UNCOMPRESSED IMAGES OVER WHATSAPP

One of the biggest issue with sharing media over a WhatsApp chat is the compression that degrades the quality severely. So, if you've just returned from a vacation and want to send the high-res pics you took with a group of friends, WhatsApp

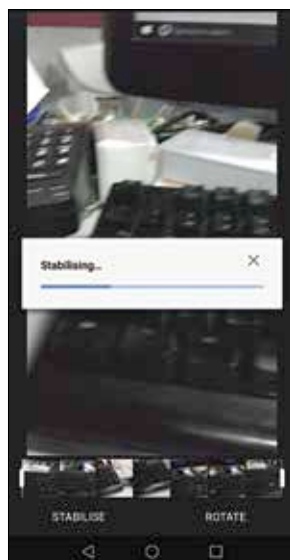

compression will compress those images before sending them. Unless you take advantage of a certain workaround. On Android, when you tap on the attachment button, instead of selecting Images or Videos, select Document. This still opens the file browser, from where you can browse to your gallery and select the images that you want to send, uncompressed. The only disadvantage of this method

is that no image preview is available. On an iPhone, you will have to save the photos to iCloud using the Files app first, and then follow a similar process to send uncompressed images.

STABILISE A VIDEO ON ANDROID, WITHOUT THIRD PARTY APPS

On Android, while using the default Google Camera app, there is a way to enable video stabilization on the app itself. Once in the app, tap the hamburger icon on the top left, and once the navigation bar opens, tap Settings. Under Video, enable video stabilisation.

There's one more way out if you're not satisfied with the stability of the recorded video. Open the Google Photos app and select the video you want to stabilise. Then tap the adjustments button on the bottom to go to the adjustments screen. Once there, tap stabilise and wait for the process to be complete. Once it is done, check the preview and hit Save, if you're satisfied, save it as a separate video from the original.

SEND FROM GMAIL

What do you do when you find an interesting link online and want to share it with a friend right away? For situations where you want more security, going for email might be better as compared to apps like WhatsApp or Facebook Messenger. The Send from Gmail Chrome extension is a handy tool to make the process instantaneous. This extension from Google simply opens up an email composition window with the Gmail account that you're signed in to on the browser. The subject line is the title of the page whereas the body contains the link (You can edit both and add additional information as well).
