

dbrand Grip

Funding: \$426,850 of \$1 goal

Link: <http://dgit.in/DBGrip>

dbrand Grip is the grippiest (we're not sure if that's actually a word, but that's what they use to describe it) phone case you will ever find. So how can they make that claim? Well, the dbrand Grip uses a patented carbon composite in their case which is a blend of carbon fiber and plastic polymers. Every nook and cranny is designed with grip in mind and it's even designed to get grippier as you use it, imagine that! Unfortunately, dbrand only makes these cases for 21 phone models as of right now, which basically covers most of Samsung's phones, the iPhones and the Nexus, Pixel and One-Plus phones.

We were kind of surprised to stumble upon dbrand on Indiegogo. They're already fairly well-known and don't need to be crowdfunded. But then we noticed that the funding goal was just \$1. Despite that, they'd already accumulated \$426,850 as of us writing this. Check it out on Indiegogo. You might even come across a demo where they tilt a glass panel almost vertically and yet the case doesn't slide off. Definitely a must have for those of you with butter fingers.

Vixari

Funding: £133,515 of £20,000 goal

Link: <http://dgit.in/VixariKick>

Vixari is a portable tripod that's designed to work with smartphones, DSLRs and GoPros while at the same time not compromise on portability.

The Vixari has a unique design when it comes to tripods. When it's folded up it takes up about as much space as a portable charger or portable hard drive would. When you need a tripod, all you need to do is open Vixari up, extend its legs, set your device up on it and start filming/shooting. The tripod allows for various different angles and can support up to 2 kgs in weight. Its design also allows you to set phones down in a way which allows you to capture image and video in the landscape view.

Additionally, there's also a Bluetooth remote with a range of 98ft/30m which you can use to remotely take snaps. It's compatible with most mounts and adaptors as well. Definitely a handy tool for travellers and folks who snap pics frequently on the move. They've even achieved their first stretch goal that adds a couple of helpful items on any reward the already consists of a Vixari tripod. These items are essentially a slippery kit and a (rough) terrain kit, which will make the setup even more versatile. The second stretch goal of £250k will also ensure the Vitari Skater Kit that will help with rolling shots. You can find the Vixari on Kickstarter.

Vinci 2.0

Funding: \$177,434 of \$20,000 goal

Link: <http://dgit.in/Vinci20>

If you're a Kickstarter frequenter you might have come across the Vinci headphones which were on the crowdfunding site not too long ago. While it had a host of interesting features, one of its key features was that the headphones had a screen/display on the side. Which kind of made no sense because you couldn't see the display once you put the headphones on.

The new Vinci 2.0 comes with a complete design overhaul. It looks nothing like its predecessor. They've gone from over ear headphones to in-ears. The

earphones are connected to a pentagon-shaped collar-like thing that sits comfortably around your neck. This also makes it lighter than its previous iteration at only 86g. Additionally, this also sits quite snugly around your neck, so there's

no worry of it falling or slipping off while you workout.

One of the key selling points for the Vinci is that you don't need your phone when using them. In fact, they claim that the "Vinci 2.0 looks like headphones but behaves like a smartphone". It can handle your music, calls, notifications etc all the while also being able to handle your fitness needs. You can store music on it locally, so you don't need to be connected to internet in order to listen to music. However, if you are connected, there's nothing stopping you from streaming off of popular streaming services. Vinci 2.0 can be operated via voice and is powered by Amazon Alexa. It also responds to a host of hand gestures as well. Check them out on Kickstarter.
