Cooler Master MasterSet MS120

Brilliant mouse performance for a combo package

Price
₹7,000

The MasterSet MS120 mouse surprisingly achieved a high sensor performance considering the A3050 sensor. The performance is persistent at all the CPI levels on the mouse except at 3,500 where it loses tracking at speeds above 1.8 m/s. Apart from performance, it's a barebones right-handed mouse with average build quality and a protrusion for your ring and little finger on the right side.

Cooler Master upgraded their older 2016 mem-mechanical design by adding a spring and tactile plunger on the MS120 keyboard. For us, the actuation force was higher, almost close to Cherry MX Greens. Coming from membrane keyboards, you might actually enjoy the tactile feedback. The RGB backlighting on the keyboard looks wonderful and overall, the build quality is decent. Compared to the other combos that we've tested, if you have a budget of about ₹6,000, then you can go ahead with the MS120. However, for a lower budget, the Gamdias Ares Essential Combo is still worthy at 3k.

Coolpad Note 5 Lite C

Outgunned

Running on Android Nougat, the Coolpad Note 5 Lite C is aimed at consumers looking for the Android experience on a budget. It is a compact smartphone with a 5-inch 720p display and can boast of 2.5D glass. The Note 5 Lite C's body is enclosed in a plastic frame and it gets a 3.5mm audio jack on the top and a micro-USB charging port at the bottom. The fingerprint sensor is accurate, but the device takes some time to unlock. Compared to the display of the Redmi Note 4, colours on the Note 5 Lite C feel washed out and under saturated. The Snapdragon 210 SoC on the smartphone severely underperforms and fails to deliver a smooth experience. Apps launch noticeably slower and we saw Chrome lagging after opening just about 10 tabs. It has 2GB of RAM, and combined with slow processing, there's not much to offer in terms of multitasking as well.

So if you're a power user, you'd do best to stay away from this one. The 8 megapixel camera on the smartphone captures disappointing photos. Images lack details and the camera app is slow to launch and laggy. Shots taken outdoors in daylight have washed out colours and the phone is unable to process details. The photos produced by the Note 5 Lite C show high visible noise and are nearly unusable. Hence, if good camera performance is your priority at this price range, you should avoid this one. Priced at ₹7,777, the Note 5 Lite C is hard to recommend due to its dull performance and sub par camera. You can always check out the Redmi 4A if you're on a tight budget.
